

Digital electronic AEB/AES drivers

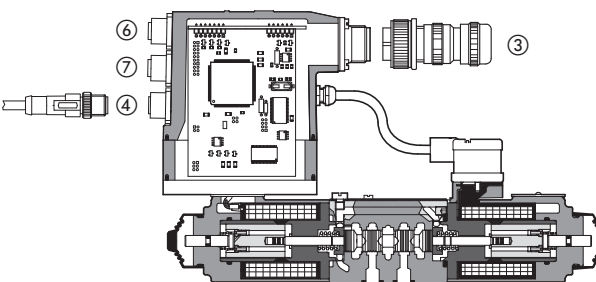

integral-to-valve format, for proportional valves without transducer

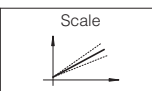

RZMO-AEB- NP Not Present

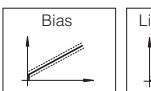

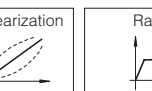

DHZO-AES- BC CANopen
BP PROFIBUS DP

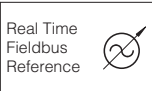

DHZO-AES- EH EtherCAT

Scale

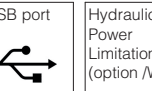

Bias

Linearization

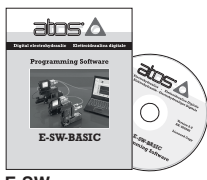

Ramps

Real Time Fieldbus Reference

Enhanced Diagnostic

USB port

Hydraulic Power Limitation (option /W)

E-SW programming software

Connector ③ and cable ④ included, to be ordered separately

AEB, AES

Digital drivers ① supply and control the current to the solenoid of Atos proportional valves without transducer, according to the electronic reference input signal. The solenoid ② proportionally transforms the current into a force, acting on the valve spool or poppet, against a reacting spring, thus providing the valve's hydraulic regulation.

AEB basic execution is equipped with USB port for programming.

AES full execution is equipped with fieldbus communication in addition to USB port for programming.

Atos PC software allows to customize the driver configuration to the specific application requirements.

Electrical Features:

- Functional factory preset parameters for best performances
- 7 pin main connector ③ for power supply, analog input reference and monitor signals
- 5 pin USB connector ④ always present
- 5 pin CANopen or PROFIBUS DP communication connector ⑤ - only for AES
- 4 pin EtherCAT communication connectors ⑥ and ⑦ (input - output) - only for AES
- /Q option 7 pin main connector for enable signal
- /Z option 12 pin main connector for additional double power supply, enable and fault signals
- /W option 5 pin connector for external pressure transducer
- Electrical protection against reverse polarity of power supply
- Operating temperature $-40^{\circ} \div +60^{\circ}$
- IP66 / IP67 protection degree
- Rugged construction
- CE mark according to EMC directive

Software Features:

- Intuitive graphic interface
- Setting of valve's functional parameters: bias, scale, ramps, dither, PID gains
- Linearization function for hydraulic regulation
- /W option software selectable max power limitation function (see 6.7)
- Complete diagnostics of driver status
- Internal oscilloscope function
- In field firmware update through USB port

Fieldbus Features - only for AES:

- Valve direct communication with machine control unit for digital reference, diagnostics and settings
- Fieldbus execution allow to operate the valves via fieldbus or via analog signals available on the main connector

1 VALVES RANGE

Valves model	Pressure				Directional		Cartridge	Flow
	RZMO	RZGO	AGMZO	AGRCZO	DHZO DKZOR	DPZO	LICZO LIMZO LIRZO	QVHZO QVKZOR
Data sheet	FS007 FS065	FS015 FS070	FS035	FS050	FS160	FS170	FS300	FS410
Driver model	AEB / AES							

2 MAIN CHARACTERISTICS

Power supply (see 4.1, 4.4)	Nominal : +24 Vdc Rectified and filtered : $V_{RMS} = 20 \div 32 V_{MAX}$ (ripple max 10 % V_{PP})
Max power consumption	50 W
Reference input (see 4.2)	Voltage: maximum range $\pm 10 V_{dc}$ Input impedance: $R_i > 50 k\Omega$ Current: maximum range $\pm 20 mA$ Input impedance: $R_i = 500 \Omega$
Monitor output (see 4.3)	Voltage: maximum range $\pm 5 V_{dc}$ @ max 5 mA
Enable input (see 4.5)	Range : $0 \div 9 V_{dc}$ (OFF state), $15 \div 24 V_{dc}$ (ON state), $9 \div 15 V_{dc}$ (not accepted); Input impedance: $R_i > 87k\Omega$
Fault output (see 4.6)	Output range : $0 \div 24 V_{dc}$ (ON state $\equiv V_{L+}$ [logic power supply] ; OFF state $\equiv 0 V$) @ max 50 mA
Pressure transducer (only /W option)	Power supply: +24Vdc @ max 100 mA Pressure input: voltage, maximum range $\pm 10 V_{dc}$ Input impedance, $R_i > 50 \Omega$ current, maximum range $\pm 20 mA$ Input impedance, $R_i = 500 \Omega$
Alarms	Solenoid not connected/short circuit, cable break with current reference signal, over/under temperature, current control monitoring, power supplies level, pressure transducer failure (/W option)
Format	Sealed box on the valve; IP66 / IP67 protection degree with mating connectors
Tropicalization	Tropical coating on electronics PCB
Operating temperature	$-40 \div +60 ^\circ C$ (storage $-40 \div +70 ^\circ C$)
Mass	Approx. 480 g (approx. 610 g for -EH execution)
Additional characteristics	Short circuit protection of solenoid current supply; current control by P.I.D. with rapid solenoid switching; protection against reverse polarity of power supply
Electromagnetic compatibility (EMC)	According to Directive 2004/108/CE (Immunity: EN 61000-6-2; Emission: EN 61000-6-3)
Communication interface	USB Atos ASCII coding CANopen - only for AES EN50325-4 + DS408 PROFIBUS DP - only for AES EN50170-2/IEC61158 EtherCAT - only for AES IEC61158
Communication physical layer	not insulated USB 2.0 + USB OTG optical insulated CAN ISO11898 optical insulated RS485 Fast Ethernet 100 Base TX
Recommended wiring cable (see 8)	LiYCY shielded cables

Note: a minimum booting time of 500 ms has be considered from the driver energizing with the 24 Vdc power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero

3 CONNECTIONS

3.1 AEB

3.2 AES - CANopen BC and PROFIBUS BP

3.3 AES - EtherCAT

3.4 Main connector signals - 7 pin - standard and /Q options (A1) - see 8.1

PIN	Standard	/Q	TECHNICAL SPECIFICATIONS	NOTES
A	V+		Power supply 24 Vdc (see 4.1)	Input - power supply
B	V0		Power supply 0 Vdc (see 4.1)	Gnd - power supply
C	AGND		Analog ground	Gnd - analog signal
		ENABLE	Enable (24 Vdc) or disable (0 Vdc) the driver, referred to V0 (see 4.5)	Input - on/off signal
D	INPUT+		Reference input signal: ± 10 Vdc / ± 20 mA maximum range (see 4.2)	Input - analog signal Software selectable
E	INPUT-		Negative reference input signal for INPUT+	Input - analog signal
F	MONITOR referred to: AGND V0		Monitor output signal: ± 5 Vdc maximum range (see 4.3)	Output - analog signal Software selectable
G	EARTH		Internally connected to driver housing	

3.5 Main connector signals - 12 pin - /Z and /W options (A2) - see 8.2

PIN	/Z	/W	TECHNICAL SPECIFICATIONS	NOTES
1	V+		Power supply 24 Vdc (see 4.1)	Input - power supply
2	V0		Power supply 0 Vdc (see 4.1)	Gnd - power supply
3	ENABLE		Enable (24 Vdc) or disable (0 Vdc) the driver, referred to V0 (see 4.5)	Input - on/off signal
4	INPUT+		Reference input signal: ± 10 Vdc / ± 20 mA maximum range (see 4.2)	Input - analog signal Software selectable
5	INPUT-		Negative reference input signal for INPUT+	Input - analog signal
6	MONITOR		Monitor output signal: ± 5 Vdc maximum range, referred to VL0 (see 4.3)	Output - analog signal Software selectable
7	NC		Do not connect	
8	NC		Do not connect	
		MONITOR2	2nd monitor output signal: ± 5 Vdc maximum range, referred to VL0 (see 4.3)	Output - analog signal Software selectable
9	VL+		Power supply 24 Vdc for driver's logic and communication (see 4.4)	Input - power supply
10	VL0		Power supply 0 Vdc for driver's logic and communication (see 4.4)	Gnd - power supply
11	FAULT		Fault (0 Vdc) or normal working (24 Vdc), referred to V0 (see 4.6)	Output - on/off signal
PE	EARTH		Internally connected to driver housing	

3.6 Communication connectors (B) - (C) - see 8.3

(B) USB connector - M12 - 5 pin always present		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	+5V_USB	Power supply
2	ID	Identification
3	GND_USB	Signal zero data line
4	D-	Data line -
5	D+	Data line +

(C1) BC fieldbus execution, connector - M12 - 5 pin (2)		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	CAN_SHLD	Shield
2	NC	do not connect
3	CAN_GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

(C2) BP fieldbus execution, connector - M12 - 5 pin (2)		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	+5V	Termination supply signal
2	LINE-A	Bus line (high)
3	DGND	Data line and termination signal zero
4	LINE-B	Bus line (low)
5	SHIELD	

(C3) (C4) EH fieldbus execution, connector - M12 - 4 pin (2)		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
Housing	SHIELD	

Notes: (1) shield connection on connector's housing is recommended (2) only for AES execution

3.7 Pressure transducer connector - M12 - 5 pin - only for /W option (D) - see 8.4

PIN	SIGNAL	TECHNICAL SPECIFICATION	Voltage	Current
1	VF +24V	Power supply +24Vdc	Connect	Connect
2	TR	Signal transducer ± 10 Vdc / ± 20 mA maximum range, software selectable - see 4.7	Connect	Connect
3	AGND	Common GND for transducer power and signals	Connect	/
4	NC	Not Connect	/	/
5	NC	Not Connect	/	/

4 SIGNALS SPECIFICATIONS

Atos proportional valves are CE marked according to the applicable directives (e.g. Immunity/Emission EMC Directive).

Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table **F003** and in the user manuals included in the E-SW programming software.

The electrical signals of the driver (e.g. monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

4.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000 μ F/40 V capacitance to single phase rectifiers or a 4700 μ F/40 V capacitance to three phase rectifiers.

A safety fuse is required in series to each driver power supply: 2,5 A fuse time lag.

4.2 Reference input signal (INPUT+)

The driver controls in closed loop the current to the valve proportionally to the external reference input signal.

Reference input signal is factory preset according to selected valve code, defaults are ± 10 Vdc for standard and $4 \div 20$ mA for /I option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 Vdc or ± 20 mA.

Drivers with fieldbus interface (BC, BP, EH) can be software set to receive reference signal directly from the machine control unit (fieldbus reference).

Analog reference input signal can be used as on-off commands with input range $0 \div 24$ Vdc.

4.3 Monitor output signals (MONITOR and MONITOR2) - only for /Z and /W options

The driver generates an analog output signal (MONITOR) proportional to the actual coil current of the valve; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, fieldbus reference).

Monitor output signal is factory preset according to selected valve code, default settings is ± 5 Vdc (1V = 1A).

Output signal can be reconfigured via software, within a maximum range of ± 5 Vdc.

Option /W

The driver generates a second analog output signal (MONITOR2) proportional to the actual system pressure.

The output maximum range is ± 5 Vdc; default setting is $0 \div 5$ Vdc

4.4 Power supply for driver's logic and communication (VL+ and VL0) - only for /Z and /W options

The power supply to the solenoids must be appropriately stabilized or rectified and filtered: apply at least a 10000 μ F/40 V capacitance to single phase rectifiers or a 4700 μ F/40 V capacitance to three phase rectifiers.

Separate power supply (pin 9,10) allow to cut solenoid power supply (pin 1,2) while maintaining active diagnostics, serial and fieldbus communication.

A safety fuse is required in series to each driver power supply: 500 mA fast fuse.

4.5 Enable input signal (ENABLE) - only for /Q, /Z and /W options

To enable the driver, supply 24 Vdc on pin 3 (pin C) referred to pin 2 (pin B): Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to active the communication and the other driver functions when the valve must be disabled for safety reasons. This condition does not comply with European Norms EN13849-1 (ex EN954-1).

4.6 Fault output signal (FAULT) - only for /Z and /W options

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for $4 \div 20$ mA input, etc.).

Fault presence corresponds to 0 Vdc, normal working corresponds to 24 Vdc (pin 11 referred to pin 2).

Fault status is not affected by the Enable input signal.

4.7 Remote Pressure Transducer Input signal (TR) - only for /W option

Analog pressure transducers can be directly connected to the driver.

Analog input signal is factory preset according to selected valve code, defaults are $0 \div 10$ Vdc for standard and $4 \div 20$ mA for /C option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 Vdc or ± 20 mA.

Note: transducer feedback can be read as a digital information through fieldbus communication - software selectable.

5 PROGRAMMING TOOLS - see tech table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options:

E-SW-BASIC support:	NP (USB)	PS (Serial)	IR (Infrared)
E-SW-FIELDBUS support:	BC (CANopen)	BP (PROFIBUS DP)	EH (EtherCAT)
	EW (POWERLINK)		
E-SW-*/PQ support:	valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)		

WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table **GS500**)

Free programming software, web download:

E-SW-BASIC web download = software can be downloaded upon web registration at www.download.atos.com ; service and DVD not included
Upon web registration user receive via email the Activation Code (software free license) and login data to access Atos Download Area

DVD programming software, to be ordered separately:

E-SW-* DVD first supply = software has to be activated via web registration at www.download.atos.com ; 1 year service included
Upon web registration user receive via email the Activation Code (software license) and login data to access Atos Download Area

E-SW-*-N DVD next supplies = only for supplies after the first; service not included, web registration not allowed
Software has to be activated with Activation Code received upon first supply web registration

Atos Download Area: direct access to latest releases of E-SW software, manuals, USB drivers and fieldbus configuration files at www.download.atos.com

USB Adapters, Cables and Terminators, can be ordered separately

USB connection

6 MAIN SOFTWARE PARAMETER SETTINGS

The following is a brief description of the main settings and features of digital drivers. For a detailed descriptions of available settings, wirings and installation procedures, please refer to the user manual included in the E-SW programming software:

E-MAN-RI-AEB - user manual for **AEB** basic execution

E-MAN-RI-AES - user manual for **AES** full execution

6.1 Scale

Scale function allows to set the maximum current supplied to the solenoid, corresponding to the max valve regulation, at maximum reference signal value.

This regulation allows to adapt the maximum current supplied from the driver to the specific nominal current of the proportional valves to which the driver is coupled; it is also useful to reduce the maximum valve regulation in front of maximum reference signal.

Two different Scale regulations are available for double solenoid valves: ScaleA for positive reference signal and ScaleB for negative reference signal.

6.2 Bias and Threshold

Proportional valves may be provided with a dead band in the hydraulic regulation corresponding to their switch-off status.

This dead band discontinuity in the valve's regulation can be compensated by activating the Bias function, which adds a fixed preset Bias value to the reference signal (analog or fieldbus external input).

The Bias function is activated when the reference signal overcomes the Threshold value, preset into the driver.

The Bias setting allows to calibrate the Bias current to the specific proportional valve to which the driver is coupled.

The Threshold setting is useful to avoid undesired valve regulation at zero reference signal when electric noise is present on the analog input signal: smaller threshold reduces the reference signal dead band, greater values are less affected by electric noise presence.

If fieldbus reference signal is active (see 4.2), threshold should be set to zero.

Two different Bias regulations are available for double solenoid valves: positive reference signals activate BiasA and negative reference signals activate BiasB.

Refer to the programming manuals for a detailed description of other software selectable Bias functions.

6.3 Offset

Proportional valves may be provided with zero overlapping in the hydraulic regulation corresponding to zero reference input signal (valve's central spool position).

The Offset function allows to calibrate the Offset current, required to obtain valve's spool central position, to the specific hydraulic system setup (e.g. valve applied to cylinder with differential areas).

6.4 Ramps

The ramp generator allows to convert sudden change of electronic reference signal into smooth time-dependent increasing/decreasing of the current supplied to the solenoid.

Different ramp mode can be set:

- single ramp for any reference variation
- two ramps for increasing and for decreasing reference variations
- four ramps for positive/negative signal values and increasing/decreasing reference variations

Ramp generator is useful for application where smooth hydraulic actuation is necessary to avoid machine vibration and shocks.

If the proportional valve is driven by a closed loop controller, the ramps can lead to unstable behaviour, for these applications ramp function can be software disabled (default setting).

6.5 Linearization - E-SW level 2 functionality

Linearization function allows to set the relation between the reference input signal and the controlled valve's regulation.

Linearization is useful for applications where it is required to linearize the valve's regulation in a defined working condition.

6.6 Variable Dither

The dither is the frequency modulation of the current supplied to the solenoid. To reduce the hysteresis should be selected a lower value of frequency, despite a lower regulation stability, because a small vibration in the valve regulating parts considerably reduces static friction effects.

To improve the regulation stability, should be selected a high value of frequency, despite a higher hysteresis. This solution in some application can lead to vibration and noise. Normally, the right setting is a compromise and depends on system setup.

AEB and AES drivers allow to realize a variable dither frequency that linearly depends on the demanded current: variable dither frequency allows an higher degree to optimize the valve hysteresis.

6.7 Hydraulic Power Limitation - only for /W option

Digital AES drivers with /W option electronically perform hydraulic power limitation on:

- direct and pilot operated flow control valves
- direct and pilot operated directional control valves + mechanical pressure compensator
- variable displacement pumps with proportional flow regulator (e.g. PVPC-LQZ, tech table **A170**)

The driver receives the flow reference signal by the analog external input INPUT+ (see 4.2) and a pressure transducer, installed in the hydraulic system, has to be connected to the driver's analog input TR (see 4.7).

When the actual requested hydraulic power $p \times Q$ (TR x INPUT+) reaches the max power limit ($p1 \times Q1$), internally set by software, the driver automatically reduces the flow regulation of the valve.

The higher is the pressure feedback the lower is the valve's regulated flow:

$$\text{Flow regulation} = \text{Min} \left(\frac{\text{PowerLimit [sw setting]}}{\text{Transducer Pressure [TR]}} ; \text{Flow Reference [INPUT+]} \right)$$

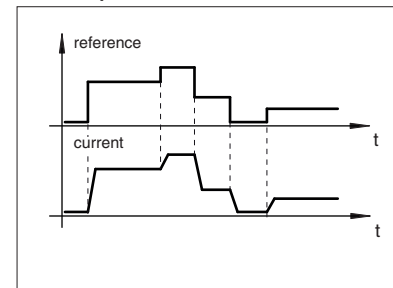

6.1, 6.2 - Scale, Bias & Threshold

6.3 - Offset

6.4 - Ramps

6.5 - Linearization

6.6 - Variable Dither

6.7 - Hydraulic Power Limitation

7 OVERALL DIMENSIONS [mm]

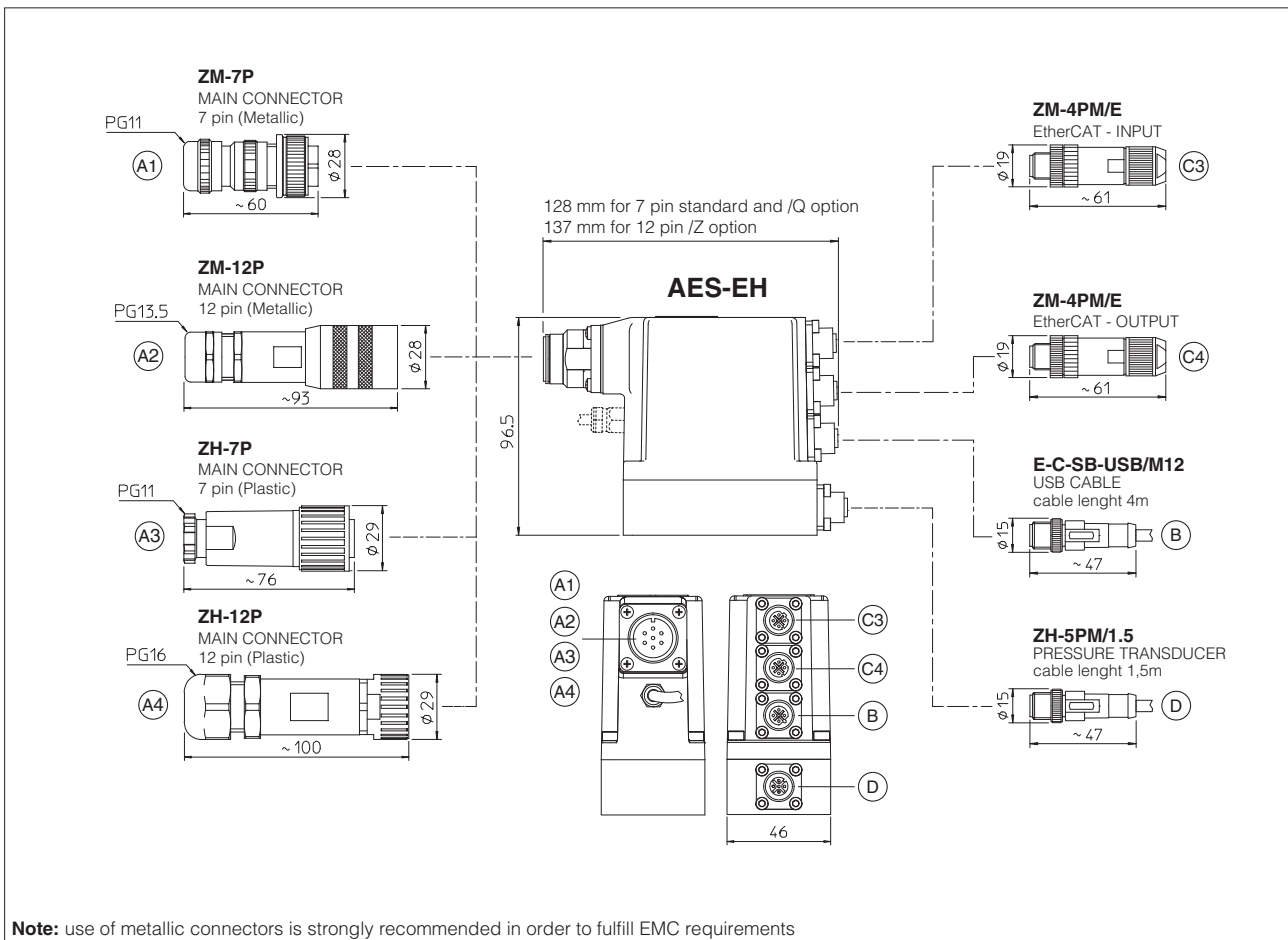

7.1 AEB

7.2 AES - CANopen BC and PROFIBUS BP

7.3 AES - EtherCAT EH

8 CONNECTORS CHARACTERISTICS - to be ordered separately

8.1 Main connectors - 7 pin

CONNECTOR TYPE	POWER SUPPLY	POWER SUPPLY
CODE	A1 ZM-7P	A3 ZH-7P
Type	7pin female straight circular	7pin female straight circular
Standard	According to MIL-C-5015	According to MIL-C-5015
Material	Metallic	Plastic reinforced with fiber glass
Cable gland	PG11	PG11
Recommended cable	LiYCY 7 x 0,75 mm ² max 20 m (logic and power supply) LiYCY 7 x 1 mm ² max 40 m (logic and power supply)	LiYCY 7 x 0,75 mm ² max 20 m (logic and power supply) LiYCY 7 x 1 mm ² max 40 m (logic and power supply)
Conductor size	up to 1 mm ² - available for 7 wires	up to 1 mm ² - available for 7 wires
Connection type	to solder	to solder
Protection (EN 60529)	IP 67	IP 67

8.2 Main connectors - 12 pin

CONNECTOR TYPE	POWER SUPPLY	POWER SUPPLY
CODE	A2 ZM-12P	A4 ZH-12P
Type	12pin female straight circular	12pin female straight circular
Standard	DIN 43651	DIN 43651
Material	Metallic	Plastic reinforced with fiber glass
Cable gland	PG13,5	PG16
Recommended cable	LiYCY 12 x 0,75 mm ² max 20 m (logic and power supply)	LiYCY 10 x 0,14mm ² max 40 m (logic) LiYY 3 x 1mm ² max 40 m (power supply)
Conductor size	0,5 mm ² to 1,5 mm ² - available for 12 wires	0,14 mm ² to 0,5 mm ² - available for 9 wires 0,5 mm ² to 1,5 mm ² - available for 3 wires
Connection type	to crimp	to crimp
Protection (EN 60529)	IP 67	IP 67

8.3 Fieldbus communication connectors - only for **AES** execution

CONNECTOR TYPE	BC CANopen (1)	BP PROFIBUS DP (1)	EH EtherCAT (2)
CODE	Ⓒ1 ZM-5PF	Ⓒ2 ZM-5PM/BP	Ⓒ3 Ⓒ4 ZM-4PM/E
