

Proportional reducing valves with integral pressure transducer

digital, two stage, closed loop high performances, rugged design

AGRCZO-R, AGRCZO-RES

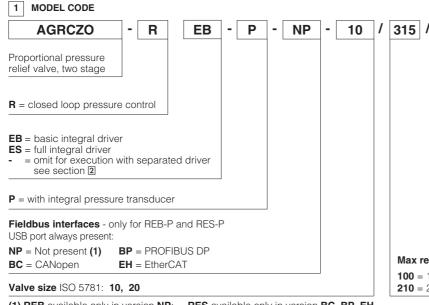

Two stage digital proportional reducing valves with integral pressure transducer for pressure closed loop controls. Executions:

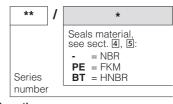

- R without integral driver, to be coupled with separated driver type E-BM-RES, see table GS203
- REB with basic integral digital electronic driver, analog reference signals and USB port for software functional parameters setting
- RES with full integral digital electronic driver and fieldbus interface for functional parameters setting, reference signals and real-time diagnostics

The integral digital electronic driver performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting

Size: 10 and 20

Max flow: 160 and 300 l/min Max pressure: 350 bar

Hydraulic options:

P = with integral mechanical pressure limiter;

R = with integral check valve for free reverse flow;

Electronics options

only for REB-P and RES-P - see section 10:

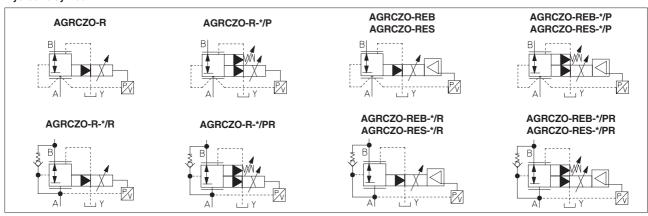

- Eurrent reference input and monitor 4 ÷ 20 mA (omit for standard voltage reference input 0 ÷ 10 V)
- **Q** = enable signal
- **Z** = double power supply, enable fault and monitor signals 12 pin connector

Max regulated pressure:

100 = 100 bar **315** = 315 bar **210** = 210 bar **350** = 350 bar

(1) REB available only in version NP; RES available only in version BC, BP, EH

Note: for main and communication connector see sections [13], [14]

3 GENERAL NOTES

AGRCZO proportional valve are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive).

Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

The electrical signals of the valve (e.g. monitor signals) must not be directly used to activate safety functions, or components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

4 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Assembly position	า	Any position				
Subplate surface	finishing	Roughness index, Ra 0,4 flatness ratio 0,01/100 (ISO 1101)				
MTTFd valves acc	cording to EN ISO 13849	75 years, see technical table P007				
Ambient temperat	ture range	standard execution = -2 /BT option = -40°C ÷ +6				
Storage temperate	ure range	Standard execution = /BT option = -40°C ÷ +				
Coil resistance R	at 20°C	$3 \div 3,3 \Omega$				
Max. solenoid cur	rent	2,6 A				
Max. power		50 Watt				
Pressure transduc	cer	E-ATR-8/*/I output sign	al = 4÷ 20 mA - see tech	. table GS465		
Insulation class			curing surface temperatu 2 must be taken into acc		the European standards	
Protection degree	to DIN EN60529	IP66/67 with mating co	nnectors			
Tropicalization (or	nly REB, RES)	Tropical coating on electronics PCB				
Duty factor		Continuous rating (ED=100%)				
EMC, climate and	mechanical load	See technical table G004				
Communication in	nterface (only REB, RES)	USB Atos ASCII coding	CANopen EN50325-4 + DS408	PROFIBUS DP EN50170-2/IEC61158	EtherCAT IEC 61158	
Communication p (only REB, RES)	hysical layer	not insulated USB 2.0 + USB OTG	optical insulated CAN ISO11898	optical insulated RS485	Fast Ethernet, insulated 100 Base TX	
Valve size		10 20			20	
Max regulated pre	essure [bar]	100; 210; 315; 350

Response time 0- (depending on ins	100% step signal (1) [ms]	≤ 45 ≤ 50			50	
Hysteresis	[% of the max pressure]	≤0,5				
Linearity	[% of the max pressure]	≤1,0				
Repeatability	[% of the max pressure]	≤0,2				
Thermal drift			zero point displaceme	nt < 1% at ΔT = 40°C		
		I .	· · · · · · · · · · · · · · · · · · ·			

Notes: above performance data refer to valves coupled with Atos electronic drivers, see section 2

(1) Average value response time; the pressure variation in consequence of a modification of the reference input signal to the valve is affected by the stiffness of the hydraulic circuit: greater is the stiffness of the circuit, faster is the dynamic response, see section [7]

5 SEALS AND HYDRAULIC FLUID - for other fluids not included in below table, consult our technical office

	NBR seals (standard) = -20°C ÷ +60°C, with HFC hydraulic fluids = -20°C ÷ +50°C				
Seals, recommended fluid temperature	FKM seals (/PE option) = -20°C ÷ +80°C				
	HNBR seals (/BT option) = -40°	C ÷ +60°C, with HFC hydraulic flu	$uids = -40^{\circ}C \div +50^{\circ}C$		
Recommended viscosity	20÷100 mm²/s - max allowed range 15 ÷ 380 mm²/s				
Fluid contamination class	ISO 4406 class 20/18/15 NAS 1638 class 9, achievable with in line filter - 10 μm (β10 ≥75 recommended)				
Hydraulic fluid	Suitable seals type	Classification	Ref. Standard		
Mineral oils	NBR, FKM, HNBR	HL, HLP, HLPD, HVLP, HVLPD	DIN 51524		
Flame resistant without water	FKM	M HFDU, HFDR			
Flame resistant with water	NBR, HNBR	HFC	ISO 12922		

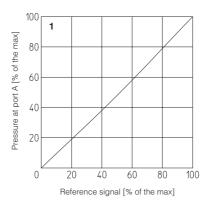

6 DIAGRAMS (based on mineral oil ISO VG 46 at 50 °C)

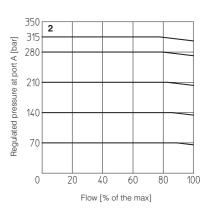

1 Regulation diagrams

with flow rate Q = 10 l/min

2 Pressure/flow diagrams

with reference pressure set with Q = 10 I/min

3-6 Pressure drop/flow diagrams

with zero reference signal

Differential pressure B→A

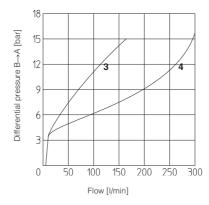

3 = AGRCZO-*-10

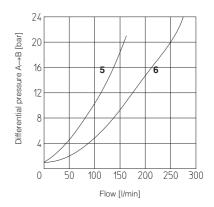

4 = AGRCZO-*-20

Differential pressure $A \rightarrow B$ (through check valve)

 $5 = AGRCZO^{-*}-10/*/R$

6 = AGRCZO-*-20/*/R

7 HYDRAULIC OPTIONS

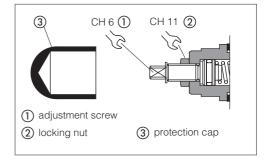

Option /P - integral mechanical pressure limiter

The AGRCZO-*/P are provided with mechanical pressure limiter acting as protection against overpressure. For safety reasons the factory setting of the mechanical pressure limiter is fully unloaded (min pressure).

At the first commissioning it must be set at a value lightly higher than the max pressure regulated with the proportional control.

For the pressure setting of the mechanical pressure limiter, proceed according to following steps:

- apply the max reference input signal to the valve's driver. The system pressure will not increase until the mechanical pressure limiter remains unloaded.
- turn clockwise the adjustment screw ① until the system pressure will increase up to a stable value corresponding to the pressure setpoint at max reference input signal.
- turn clockwise the adjustment screw ① of additional 1 or 2 turns to ensure that the mechanical pressure limiter remains closed during the proportional valve working.

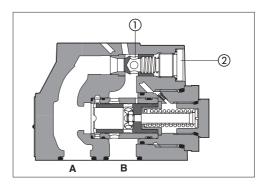

Option /R - integral check valve for free reverse flow

The AGRCZO-*/ $\bf R$ are provided with integral check valve for free reverse flow $\bf A \rightarrow \bf B$

① Check valve - cracking pressure = 0,5 bar

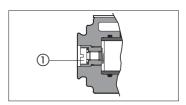

2 Plug

8 AIR BLEEDING

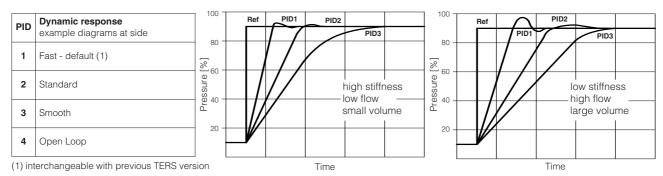

At the first valve commissioning the air eventually trapped inside the solenoid must be bled-off though the screw ① located at the rear side of the solenoid housing.

The presence of air may cause pressure instability and vibrations.

9 DYNAMIC RESPONSE - 4 pressure PIDs

The valve is provided with 4 PIDs configurations to match different hydraulic conditions. The required PID configuration can be selected before the valve commissioning, through Atos E-SW software via USB port. Only for **RES** the PID can be also selected in real time, through PLC via fieldbus.

Above indications have to be considered as a general guideline, being affected by hydraulic circuit stiffness, working flow and dead volume. The valve's dynamics can be further optimized on the specific application, customizing PIDs parameters.

10 ELECTRONIC OPTIONS

Standard driver execution provides on the 7 pin main connector:

Power supply

24Vpc must be appropriately stabilized or rectified and filtered; a 2,5 A safety fuse is required in series to each driver power supply. Apply at least a 10000 μ F/40 V capacitance to single phase rectifiers or a 4700 μ F/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with 0÷+10 Vpc nominal range (pin D,E), proportional to desired valve pressure regulation Monitor output signal - analog output signal proportional to the actual valve pressure regulation = 0÷+10 Vpc nominal range

Note: a minimum booting time of 500 ms has be considered from the driver energizing with the 24 VDC power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

10.1 Option /I

It provides $4 \div 20$ mA current reference and monitor signals, instead of the standard ± 10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage

10.2 Option /Q

It provides the possibility to enable or disable the valve functioning without cutting the power supply (the valve functioning is disabled but the driver current output stage is still active). To enable the driver supply a 24 VDC on the enable input signal

10.3 Option /Z

It provides, on the 12 pin main connector, the following additional features:

Enable Input Signal

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: when the Enable signal is set to zero the valve functioning is disabled (zero current to the solenoid) but the driver current output stage is still active.

Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

Power supply for driver's logics and communication

Separated power supply for the solenoid (pin 1, 2) and for the digital electronic circuits (pin 9, 10).

Cutting solenoid power supply allows to interrupt the valve functioning but keeping energized the digital electronics thus avoiding fault conditions of the machine fieldbus controller.

10.4 Possible combined options: /IQ, /IZ

PROGRAMMING TOOLS - see tech table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options:

 E-SW-BASIC
 support:
 NP (USB)
 PS (Serial)
 IR (Infrared)

 E-SW-FIELDBUS
 support:
 BC (CANopen)
 BP (PROFIBUS DP)
 EH (EtherCAT)

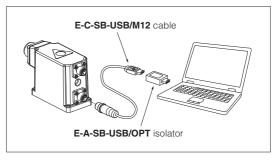

EW (POWERLINK)

E-SW-*/PQ support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table ${f GS500}$)

USB connection

12 ELECTRONIC CONNECTIONS

12.1 Main connector signals - 7 pin - standard and /Q option - AGRCZO-REB and AGRCZO-RES (A1)

PIN	Standard	/Q	TECHNICAL SPECIFICATIONS	NOTES
Α	V+		Power supply 24 Vpc	Input - power supply
В	VO		Power supply 0 Vpc	Gnd - power supply
С	AGND		Analog ground	Gnd - analog signal
		ENABLE	Enable (24 Vpc) or disable (0 Vpc) the driver, referred to V0	Input - on/off signal
D	P_INPUT+		Pressure reference input signal: ±10 Vpc / ±20 mA maximum range Defaults are 0 ÷ 10 Vpc for standard and 4 ÷ 20 mA for /I option	Input - analog signal Software selectable
Е	INPUT-		Negative reference input signal for P_INPUT+	Input - analog signal
F	P_MONITOR referred to: AGND V0		Pressure monitor output signal: $0 \div 10 \text{ Vpc}$ / $0 \div 20 \text{ mA}$ maximum range, referred to VL0 Defaults are $0 \div 10 \text{ Vpc}$ for standard and $4 \div 20 \text{ mA}$ for /I option	Output - analog signal Software selectable
G	G EARTH		Internally connected to driver housing	

12.2 Main connector signals - 12 pin - /Z option - AGRCZO-REB and AGRCZO-RES (A2)

PIN	/Z	TECHNICAL SPECIFICATIONS	NOTES
1	V+	Power supply 24 Vpc	Input - power supply
2	V0	Power supply 0 Vpc	Gnd - power supply
3	ENABLE	Enable (24 Vpc) or disable (0 Vpc) the driver, referred to V0	Input - on/off signal
4	P_INPUT+	Pressure reference input signal: ±10 Vpc / ±20 mA maximum range Defaults are 0 ÷ 10 Vpc for standard and 4 ÷ 20 mA for /I option	
5	INPUT-	Negative reference input signal for P_INPUT+	Input - analog signal
6	P_MONITOR	Pressure monitor output signal: 0 ÷ 10 Vbc / 0 ÷ 20 mA maximum range, referred to VL0 Defaults are 0 ÷ 10 Vbc for standard and 4 ÷ 20 mA for /I option	Output - analog signal Software selectable
7	NC	Do not connect	
8	NC	Do not connect	
9	VL+	Power supply 24 Vpc for driver's logic and communication	Input - power supply
10	VL0	Power supply 0 Vpc for driver's logic and communication	Gnd - power supply
11	FAULT	Fault (0 Vpc) or normal working (24 Vpc), referred to V0	Output - on/off signal
PE	EARTH	Internally connected to driver housing	

12.3 Communication connectors - AGRCZO-REB (B) and AGRCZO-RES (C)
