Type ADH.8 distributors are intended for interrupting, inserting and diverting a hydraulics system flow. Normally these distributors are composed of a main stage, crossed by circuit main flow, and of a pilot stage available in several versions. Various types of controls are available, used either individually or in combination for, among other functions, stroke limitation and main spool movement speed control, in order to optimize the hydraulic system operation where this type of valve is employed. In those cases where normally to drain spools are used, it is necessary to remember that the minimum changeover pressure due to the opposing springs is equal to approximately 5 bar (see the operating features table next pages) and it is consequently necessary to specify when ordering the check valve incorporated in the P line, if required (as shown below).

- Mounting surface in accordance with UNI ISO 4401 - 08 - 07 - 0 - 94 standard (ex CETOP R 35 H 4.2-4-08).
- Pilot operated spool, solenoid controller.
- Stroke control of main spool.
- Presetting for pressure reducing valve mounting.
- Presetting for single-acting throttle valve mounting.

### ORDERING CODE

### PRESSURE DROPS

The diagram shows the pressure drops in relation to spools adopted for normal usage (see table).  
The fluid used was a mineral based oil with a viscosity of 35 mm<sup>2</sup>/s at 50° C.

| Spool type  | Connections      |                  |                  |                  |                  |
|---|------------------|------------------|------------------|------------------|------------------|
|   | P→A              | P→B              | A→T              | B→T              | P→T              |
| 01  | 1                | 1                | 2                | 3                |                  |

| Weight ADH8 with pilot valve with 2 AC solenoids                     | 14,6 Kg  |
| Weight ADH8 with pilot valve with 2 DC solenoids                     | 15,1 Kg  |

\* For valves with internal drain (Y), tank pressure on T must be added to min. piloting pressure.  
Min. piloting pressure is 5 bar with low flow rate, but it is up to 12 bar with higher flow rate.

For version "R" with check valve on P, the cracking pressure of 5 bar is obtained with flow rate > 25 l/min.

### Switching time

Such values refer to a solenoid valve with P = 100 bar pressure using a mineral oil at 50°C with 36 mm<sup>2</sup>/sec viscosity PA and BT connections.

### SWITCHING TIMES PILOTED VALVE

| Solenoids | ENERGIZING ±10% (ms) |          | DE-ENERGIZING ±10% (ms) |          |

## OVERALL DIMENSIONS

## CETOP 8 MOUNTING SURFACE

- Piloted valve fixing: n° 6 screws T.C.E.I. M12x60
- Tightening torque: 115 Nm with screw Cl. 12.9\*\*  
69 Nm with screw Cl. 8.8

\*\* Recommended for applications over 350 bar

- Seals: n°4 OR2-123/3118 type (29.82x2.62) - 90 Shore  
n°2 OR2-117/3081 type (20.24x2.62) - 90 Shore

### SPOOL STROKE ADJUSTMENT (LC variant)

- 1 Piloted solenoid valve type **AD3E (CETOP3 NG6)**
- 2 Flow regulation valve type **AM3QF.C**
- 3 Pressure reduction valve type **AM3RD..C**
- 4 Main valve type **ADH8\***

\* The piloted valve is provided with a calibrated screw M6 with hole Ø1.5, already mounted on the port "P".
