

Servoproportional directional valves in sleeve execution

digital, direct operated, with position transducer and zero spool overlap with fail safe, rugged design

DLHZO-TEB, DLHZO-TES DLKZOR-TEB, DLKZOR-TES

Servoproportional direct operated digital proportional valves in sleeve execution with position transducer and zero spool overlap for best performances in any position closed loop control.
The integral digital electronic driver

performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting.

They are available in TEB basic execution with analog reference signals and USB port for software functional parameters setting or in TES full execution which includes also optional alternated P/Q controls and fieldbus interfaces for functional parameters setting, reference signals and real-time diagnostics.

Digital TEZ (see tech. table FS230) version integrates the closed loop axis control functions, while TEB and TES versions can be used in combination with remote Z-ME-KZ digital axis controller (see tech. table G340).

> Seals material see sect. 6. 7: = NBR

PE = FKM

BT = HNBR

Size: 06 and 10

**

Max flow: 70 and 160 I/min Max pressure: 350 bar (DLHZO) 315 bar (DLKZOR)

Series number

B = solenoid, integral electronics and position

I = current reference input and monitor 4÷20 mA

Z = double power supply (4), enable, fault and monitor signals - 12 pin connector

C = current feedback for remote transducer(s)

(omit for standard voltage reference input

Hydraulic options, see section 11:

transducer at side of port A

Electronic options, see section 12:

and monitor ±10 V)

Y = external drain

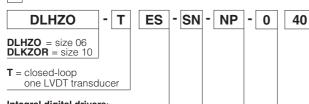

Only for SN (3):

F = fault signal

Q = enable signal

Only for SP, SF, SL:

Fail safe configuration - see section 10:

Integral digital drivers: EB = basic (1)

ES = full Alternated P/Q controls, see section 4:

SN = none (1)

SP = pressure control (1 pressure tranducer) SF = force control (2 pressure tranducers)

SL = force control (1 load cell)

Fieldbus interfaces USB port always present:

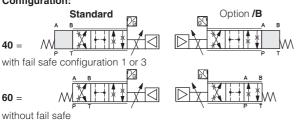

NP = Not present (1)

2 GENERAL NOTES

DLHZO-TES, TEB and DLKZOR-TES, TEB proportional valves are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components. The electrical signals of the valve (e.g. monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

3 AXIS CONTROLLER

Digital servoproportional with integral electronics **TEZ** include valve's driver plus axis controller, performing position closed loop of any hydraulic actuator equipped with analog, encoder or SSI position transducer. S* option add alternated P/Q control to the basic position ones. For detailed information about integral axis controller see tech table **FS230**.

Atos also supply complete servoactuators integrating servocylinder, digital servoproportional valve and axis controller, fully assembled and tested. For more information consult Atos Technical Office.

4 ALTERNATED P/Q CONTROLS - only for TES

S* options add the closed loop control of pressure (SP) or force (SF and SL) to the basic functions of proportional directional valves flow regulation. A dedicated algorithm alternates pressure (force) depending on the actual hydraulic system conditions.

An additional connector is available for transducers to be interfaced to the valve's driver (1 pressure transducer for SP, 2 pressure transducers for SF or 1 load cell for SL). Main 12 pin connector is the same as /Z option plus two analog signals specific for the pressure (force) control. For detailed information and connector wiring of options SP, SF, SL see tech table **GS212**.

5 FIELDBUS - only for TES

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector. For detailed information about fieldbus features and specification see tech table **GS510**.

6 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Assembly position	Any position	Any position					
Subplate surface finishing	Roughness index, Ra 0	loughness index, Ra 0,4 flatness ratio 0,01/100 (ISO 1101)					
MTTFd valves according to EN ISO 13849	150 years, see technica	al table P007

DIAGRAMS (based on mineral oil ISO VG 46 at 50 °C)

9.1 Regulation diagrams

- 1 = Linear spools L
- 2 = Differential linear spool D7
- 3 = Differential non linear spool DT7
- 4 = Non linear spool T5 (only for DLHZO)
- 5 = Non linear spool T7
- 6 = Progressive spool V

The non linear characteristics of the spool is compensated by the electronic driver, so the final valve regulation is resulting linear respect the reference signal (dotted line).

DT7 has the same characteristic of T7 but it is specific for applications with cylinders with area ratio 1:2

Hydraulic configuration vs. reference signal: Standard:

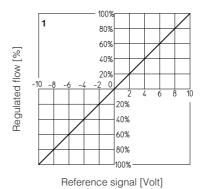

Reference signal

 $0 \div -10 \text{ V}$ $12 \div 4 \text{ mA}$ $P \rightarrow B / A \rightarrow T$ Reference signal

option /B:

 $\begin{array}{c} 0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} \end{array} \} \text{ P} \rightarrow \text{B} / \text{A} \rightarrow \text{T}$ Reference signal

 $\begin{array}{c} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} \right\} P \rightarrow A / B \rightarrow T$ Reference signal

Stated at 100% of spool stroke

DLHZO:

1 = spool L7, T7, V7, D7, DT7

2 = spool L5, T5

3 = spool V3

4 = spool L3

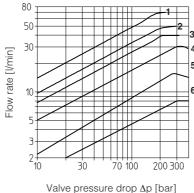

5 = spool L1, V1

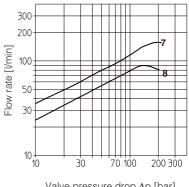

6 = spool L0

DLKZOR:

7 = spool L7, T7, V7, D7, DT7

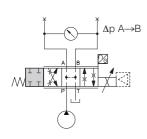

8 = spool L3

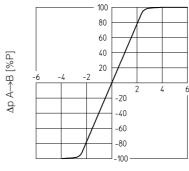

Valve pressure drop Δp [bar]

9.3 Pressure gain

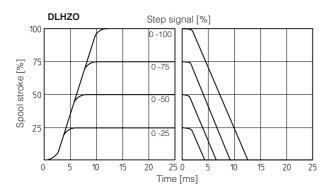

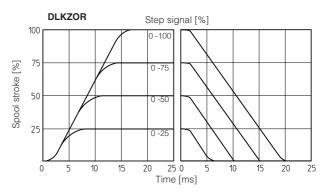

Spool stroke [%]

9.4 Response time

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

9.5 Bode diagrams

Stated at nominal hydraulic conditions

DLHZO:

 $1 = \pm 100\%$ nominal stroke

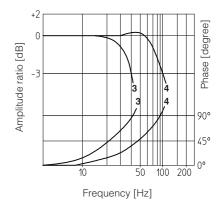

2 = ± 5% nominal stroke

DLKZOR:

 $3 = \pm 100\%$ nominal stroke

5% nominal stroke

10 FAIL SAFE POSITION

Fail safe connections		$P \rightarrow A$	$P \rightarrow B$	$A \rightarrow T$	$B \rightarrow T$
Leakage [cm³/min]	Fail safe 1	50	70	70	50
at P = 100 bar (1)	Fail safe 3	50	70	-	-
Flow [I/min] (2) DLHZO	- Fail safe 3	-	-	15÷30	10÷20
Flow [I/min] (2) DLKZOF	- 1 all sale 3 }	-	-	40÷60	25÷40

Notes:

(1) Referred to spool in fail safe position and 50°C oil temperature.

(2) Referred to spool in fail safe position at $\Delta p = 35$ bar per edge

11 HYDRAULIC OPTIONS

11.1 Option /B

Solenoid, integral electronics and position transducer at side of port A of the main stage. For hydraulic configuration vs reference signal, see section 9.1

11.2 Option /Y

Option /Y is mandatory if the pressure in port T exceeds 160 bar.

12 ELECTRONIC OPTIONS

Standard driver execution provides on the 7 pin main connector:

Power supply

- 24 VDc must be appropriately stabilized or rectified and filtered; **2,5 A** fuse time lag is required in series to each driver power supply. Apply at least a 10000 μ F/40 V capacitance to single phase rectifiers or a 4700 μ F/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with ±10 VDC nominal range (pin D, E), proportional to desired valve spool position

Monitor output signal - analog output signal proportional to the actual valve's spool position with ±10VDC nominal range

Note: a minimum booting time between 400 and 800 ms has be considered from the driver energizing with the 24 Vpc power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

12.1 Option /F

It provides a Fault output signal in place of the Monitor output signal, to indicate fault conditions of the driver (cable interruption of spool transducers or reference signal - for /I option): Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC

12.2 Option /I

It provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard ±10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

12.3 Option /Q

It provides the possibility to enable or disable the valve functioning without cutting the power supply (the valve functioning is disabled but the driver current output stage is still active). To enable the driver supply a 24 VDC on the enable input signal.

12.4 Option /Z

It provides, on the 12 pin main connector, the following additional features:

Enable Input Signal

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: when the Enable signal is set to zero the valve functioning is disabled (zero current to the solenoid) but the driver current output stage is still active.

Fault Output Signal

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

Power supply for driver's logics and communication - only for TES

Separated power supply for the solenoid (pin 1, 2) and for the digital electronic circuits (pin 9, 10).

Cutting solenoid power supply allows to interrupt the valve functioning but keeping energized the digital electronics thus avoiding fault conditions of the machine fieldbus controller. This condition aids to realize safety systems in compliance with European Norms EN13849-1 (ex EN954-1).

12.5 Options /C - only for SP, SF, SL

Option /C is available to connect pressure (force) transducers with $4 \div 20$ mA current output signal, instead of the standard ± 10 V. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 V or ± 20 mA.

12.6 Possible combined options

For SN: /FI, /IQ and /IZ

For SP, SF, SL: /CI

13 ELECTRONIC CONNECTIONS AND LEDS

16 PROGRAMMING TOOLS - see table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options:

 E-SW-BASIC
 support:
 NP (USB)
 PS (Serial)
 IR (Infrared)

 E-SW-FIELDBUS
 support:
 BC (CANopen)
 BP (PROFIBUS DP)
 EH (EtherCAT)

EW (POWERLINK)

E-SW-*/PQ support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table **GS500**)

ptions: IR (Infrared) EH (EtherCAT) E-SW-BASIC/PQ) see table **GS500**)
