

FUNCTION

The pilot-to-open check valve RP16A is a direct-acting, spring-loaded poppet valve.

The valve allows flow from port 2 to 1. In the opposite direction, the poppet is pressed onto the seat and blocks flow. If a sufficiently high control pressure is applied to port 3, the poppet is lifted from the valve seat and oil flows from 1 to 2. The necessary pilot pressure at port 3 is dependent on the pressures across port 1 and 2.

The following applies: $p_{\text{control}} = \frac{p_{\text{port 1}} - p_{\text{port 2}}}{\varphi} + p_{\text{port 2}}$

Check Valve Pilot-to-Open Poppet Type, Direct-Acting SAE-16 Cartridge – 420 bar RP16A-01
