

# Proportional pressure control cartridges with integral pressure transducer

digital, closed loop high performances - compensator, relief, reducing functions, rugged design

### LICZO, LIMZO and LIRZO

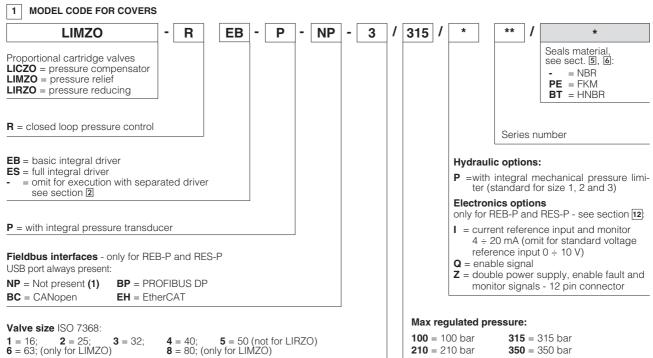

2-way digital proportional cartridge valves respectively performing: pressure compensator, relief and reducing functions. Executions:

- R without integral driver, to be coupled with separated driver type E-BM-RES, see table GS203
- REB with basic integral digital electronic driver, analog reference signals and USB port for software functional parameters setting
- RES with full integral digital electronic driver and fieldbus interface for functional parameters setting, reference signals and real-time diagnostics

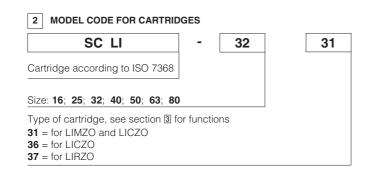

The integral digital electronic driver performs the valve's hydraulic regulation according to the reference signal and assures valve-to-valve interchangeability thanks to the factory presetting

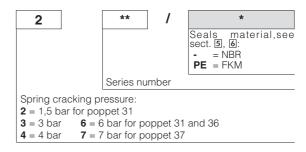

Size: 16 to 80

Max flow: up to **4500 l/min** Max pressure: **350 bar** 

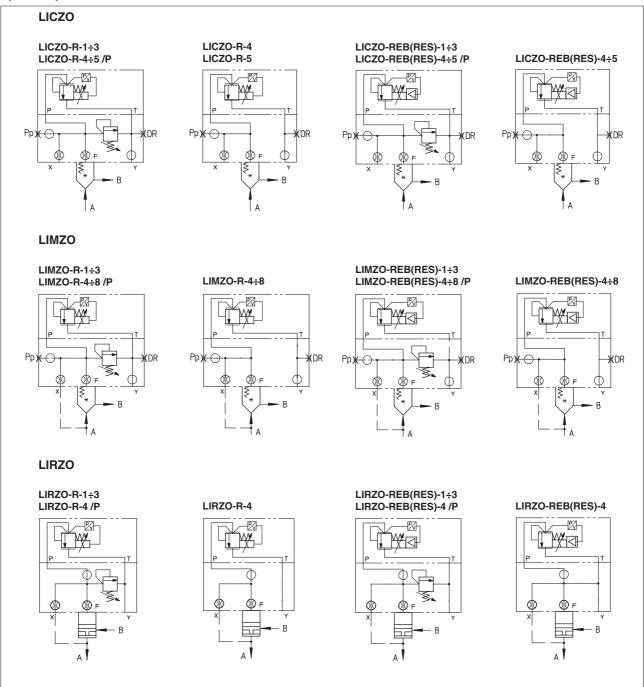

(1) REB available only in version NP; RES available only in version BC, BP, EH

Note: for main and communication connector see sections [15], [16]

### 4 GENERAL NOTES

Ll\*ZO-R\* proportional valve are CE marked according to the applicable Directives (e.g. Immunity/Emission EMC Directive and Low Voltage Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in table F003 and in the installation notes supplied with relevant components.

The electrical signals of the valve (e.g. monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

### 5 MAIN CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Assembly position	Any position				
Subplate surface finishing	Roughness index, Ra 0,4 flatness ratio 0,01/100 (ISO 1101)				
MTTFd valves according to EN ISO 13849	75 years, see technical t	75 years, see technical table P007			
Ambient temperature range		standard execution = -20°C ÷ +60°C /BT option = -40°C ÷ +60°C			
Storage temperature range	Standard execution = -2 /BT option = -40°C ÷ +7				
Coil resistance R at 20°C	3 ÷ 3,3 Ω				
Max. solenoid current	2,6 A				
Max. power	50 Watt				
Pressure transducer	E-ATR-8/*/I output signa	$I = 4 \div 20 \text{ mA}$ - see tech.	table G465		
Insulation class	' '	uring surface temperature 2 must be taken into acco	es of the solenoid coils, thount	e European standards	
Protection degree to DIN EN60529	IP66/67 with mating con	nectors			
Tropicalization (only REB, RES)	Tropical coating on elec	tronics PCB			
Duty factor	Continuous rating (ED=	100%)			
EMC, climate and mechanical load	See technical table G00	4			
Communication interface (only REB, RES)	USB Atos ASCII coding	CANopen EN50325-4 + DS408	PROFIBUS DP EN50170-2/IEC61158	EtherCAT IEC 61158	
Communication physical layer (only REB, RES)	not insulated USB 2.0 + USB OTG	optical insulated CAN ISO11898	optical insulated RS485	Fast Ethernet, insulated 100 Base TX

Repeatibility [% of regulated max pres.]		≤0,2															
Thermal drift			zero point displacement < 1% at ΔT = 40°C														

Notes: above performance data refer to valves coupled with Atos electronic drivers, see section 3

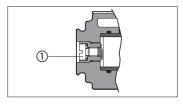

## 6 SEALS AND HYDRAULIC FLUID - for other fluids not included in below table, consult our technical office

Seals, recommended fluid temperature	NBR seals (standard) = $-20^{\circ}$ C $\div$ $+60^{\circ}$ C, with HFC hydraulic fluids = $-20^{\circ}$ C $\div$ $+50^{\circ}$ C FKM seals (/PE option) = $-20^{\circ}$ C $\div$ $+80^{\circ}$ C HNBR seals (/BT option) = $-40^{\circ}$ C $\div$ $+60^{\circ}$ C, with HFC hydraulic fluids = $-40^{\circ}$ C $\div$ $+50^{\circ}$ C				
Recommended viscosity	20÷100 mm²/s - max allowed range 15 ÷ 380 mm²/s				
Fluid contamination class	ISO 4406 class 20/18/15 NAS 1638 class 9, achievable with in line filter - 10 μm (β10 ≥75 recommended)				
Hydraulic fluid	Suitable seals type	Classification	Ref. Standard		
Mineral oils	NBR, FKM, HNBR	HL, HLP, HLPD, HVLP, HVLPD	DIN 51524		
Flame resistant without water	FKM	HFDU, HFDR	ISO 12922		
Flame resistant with water	NBR, HNBR	HFC	100 12322		

### 7 AIR BLEEDING

At the first valve commissioning the air eventually trapped inside the solenoid must be bled-off though the screw 0 located at the rear side of the solenoid housing.

The presence of air may cause pressure instability and vibrations.

<sup>(1)</sup> Average value response time; the pressure variation in consequence of a modification of the reference input signal to the valve is affected by the stiffness of the hydraulic circuit: greater is the stiffness of the circuit, faster is the dynamic response, see section [7]

<sup>(2)</sup> consult our technical office

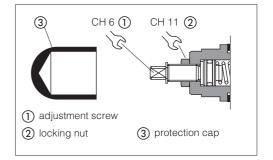

### 8 HYDRAULIC OPTIONS

### Option /P - integral mechanical pressure limiter (standard for size 1, 2 and 3)

The AGRCZO standard size 1, 2, 3 and option /P are provided with mechanical pressure limiter acting as protection against overpressure. For safety reasons the factory setting of the mechanical pressure limiter is fully unloaded (min pressure). At the first commissioning it must be set at a value lightly higher than the max pressure regulated with the proportional control.

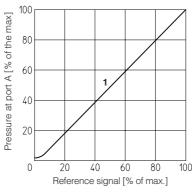

For the pressure setting of the mechanical pressure limiter, proceed according to following steps:

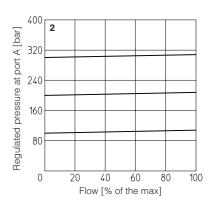

- apply the max reference input signal to the valve's driver. The system pressure will not increase until the mechanical pressure limiter remains unloaded.
- turn clockwise the adjustment screw (1) until the system pressure will increase up to a stable value corresponding to the pressure setpoint at max reference input signal.
- turn clockwise the adjustment screw (1) of additional 1 or 2 turns to ensure that the mechanical pressure limiter remains closed during the proportional valve working.

### DIAGRAMS (based on mineral oil ISO VG 46 at 50 °C)

### 10 DYNAMIC RESPONSE - 4 pressure PIDs

The valve is provided with 4 PIDs configurations to match different hydraulic conditions. The required PID configuration can be selected before the valve commissioning, through Atos E-SW software via USB port. Only for RES the PID can be also selected in real time, through PLC via fieldbus.

Above indications have to be considered as a general guideline, being affected by hydraulic circuit stiffness, working flow and dead volume. The

### 11 PRESSURE TRANSDUCER FAILURE

In case of pressure transducer failure, the valve's reaction can be configured through Atos E-SW software to:

valve's dynamics can be further optimized on the specific application, customizing PIDs parameters.

- cut off the current to solenoid, therefore the regulated pressure will be reduced to minimum value (default setting)
- automatically switch the pressure control from closed loop (PID1,2,3) to open loop (PID4), to let the valve to temporarily operate with reduced regulation accuracy

### 12 ELECTRONIC OPTIONS

Standard driver execution provides on the 7 pin main connector:

Power supply

24Vpc must be appropriately stabilized or rectified and filtered; a 2,5 A safety fuse is required in series to each driver power supply. Apply at least a 10000 μF/40 V capacitance to single phase rectifiers or a 4700 μF/40 V capacitance to three phase rectifiers

Reference input signal - analog differential input with 0÷+10 Vpc nominal range (pin D,E), proportional to desired valve pressure regulation

Monitor output signal - analog output signal proportional to the actual valve pressure regulation = 0÷+10 Vpc nominal range

Note: a minimum booting time of 500 ms has be considered from the driver energizing with the 24 VDC power supply before the valve has been ready to operate. During this time the current to the valve coils is switched to zero.

### 12.1 Option /I

It provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard ±10 V.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 V or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage

It provides the possibility to enable or disable the valve functioning without cutting the power supply (the valve functioning is disabled but the driver current output stage is still active). To enable the driver supply a 24 VDC on the enable input signal

### 12.3 Option /Z

It provides, on the 12 pin main connector, the following additional features:

To enable the driver, supply 24 VDC on pin 3 referred to pin 2: when the Enable signal is set to zero the valve functioning is disabled (zero current to the solenoid) but the driver current output stage is still active

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal cable broken for 4÷20mA input, etc.). Fault presence corresponds to 0 VDC, normal working corresponds to 24 VDC (pin 11 referred to pin 2): Fault status is not affected by the Enable input signal

### Power supply for driver's logics and communication

Separated power supply for the solenoid (pin 1, 2) and for the digital electronic circuits (pin 9, 10).

Cutting solenoid power supply allows to interrupt the valve functioning but keeping energized the digital electronics thus avoiding fault conditions of the machine fieldbus controller.

### 12.4 Possible combined options: /IQ, /IZ

### | 13 | PROGRAMMING TOOLS - see tech table GS500

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver. For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus

The software is available in different versions according to the driver's options:

E-SW-BASIC support: NP (USB) PS (Serial) IR (Infrared) BP (PROFIBUS DP) **E-SW-FIELDBUS** support: BC (CANopen) EH (EtherCAT)

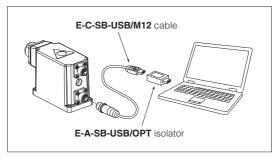

EW (POWERLINK)

E-SW-\*/PQ support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

### WARNING: drivers USB port is not isolated!

The use of isolator adapter is highly recommended for PC protection (see table GS500)

### **USB** connection

### 14 ELECTRONIC CONNECTIONS
