HYDRAULIC SERVO CONTROL

The pump displacement variation is obtained by adjusting the pressure on P1 and P2 servo control ports by means of a hydraulic proportional joystick (with integrated pressure reducing valves).

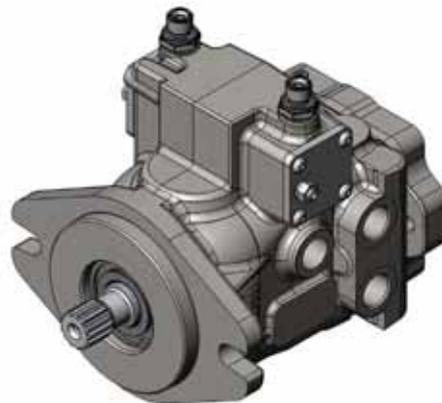

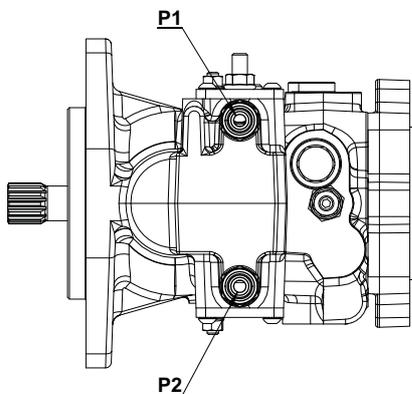

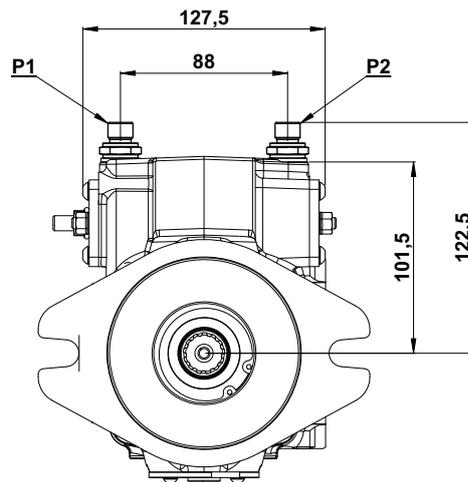

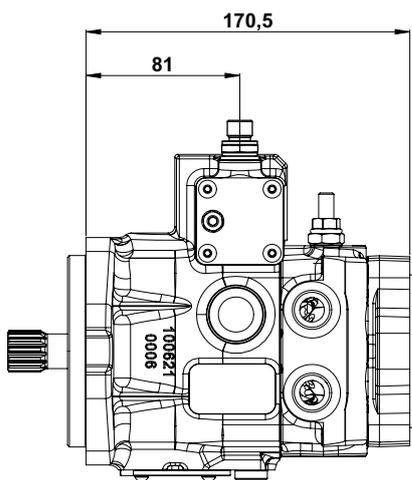

The servo control oils supply can be obtained by taking pressure from the boost pump (G port), see pag. 18.

The servo control return time can be adjusted by inserting a restrictor on the joystick supply

line (0,5 ÷ 1,2 mm).

The servo control operation curve, in both directions, goes from 0,4 to 1,8 MPa (tolerance $\pm 5\%$).

The adjusting curve of the hydraulic joystick has to be a little wider (0,3 ÷ 1,9 MPa).

OPTIONAL VS-SB

PURGE VALVE WITH SCREW BY-PASS

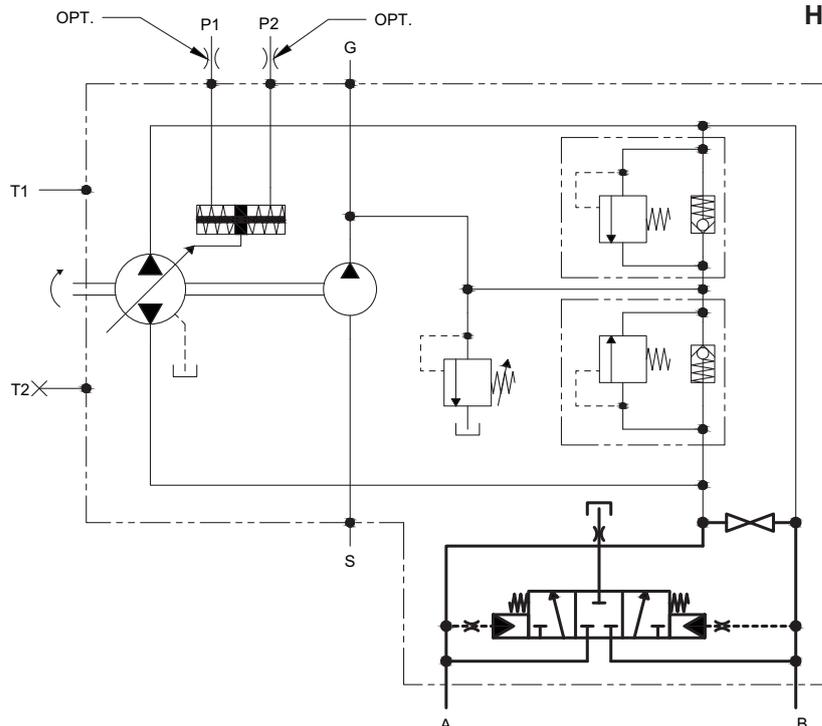

For the pump TPV-TPVTC 1500 an integrated purge valve (loop flushing) is available.

The valve consists of a spring centered shuttle spool connecting automatically the low pressure line (boost) with the reservoir removing heat from the system.

The quantity of the flushing oil is a function of the low system pressure (boost) and the size of the orifice on the valve (different orifices are available referred to the system pressure). The spool shifts at a differential pressure of about 0,8 MPa (116 PSI).

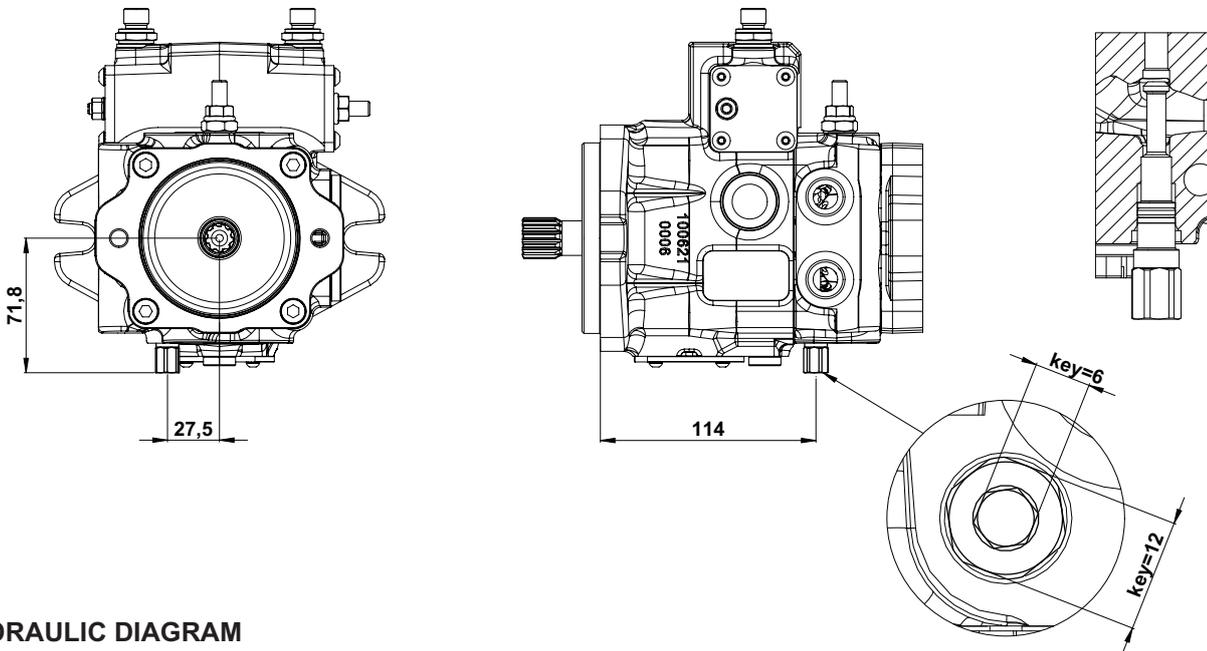

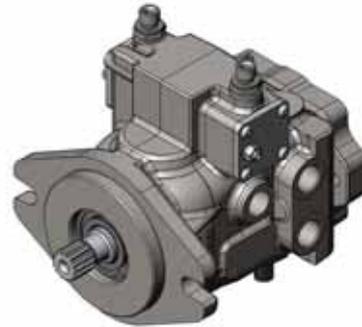

HYDRAULIC DIAGRAM

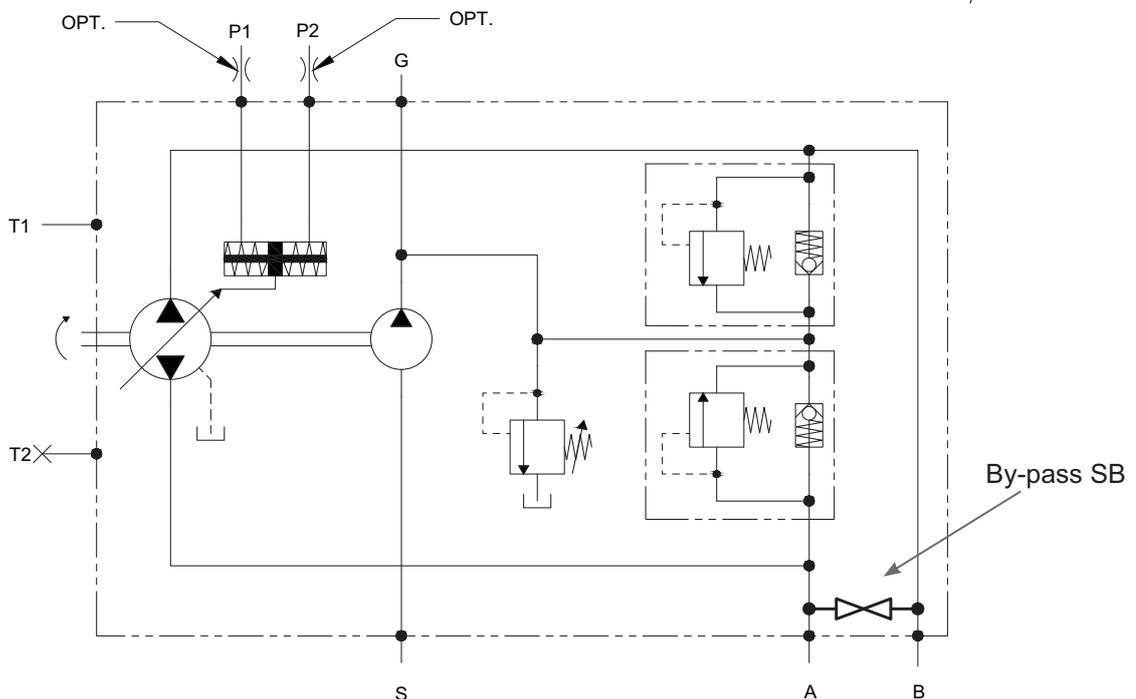

OPTIONAL SB

SCREW BY-PASS

To by pass the oil flow from one direction to the other, with the pump not running or in emergency condition, a by pass screw can be actuated to connect the 2 lines of the hydraulic system. The orifice is completely open after 4 counter-clockwise rotations of the screw.

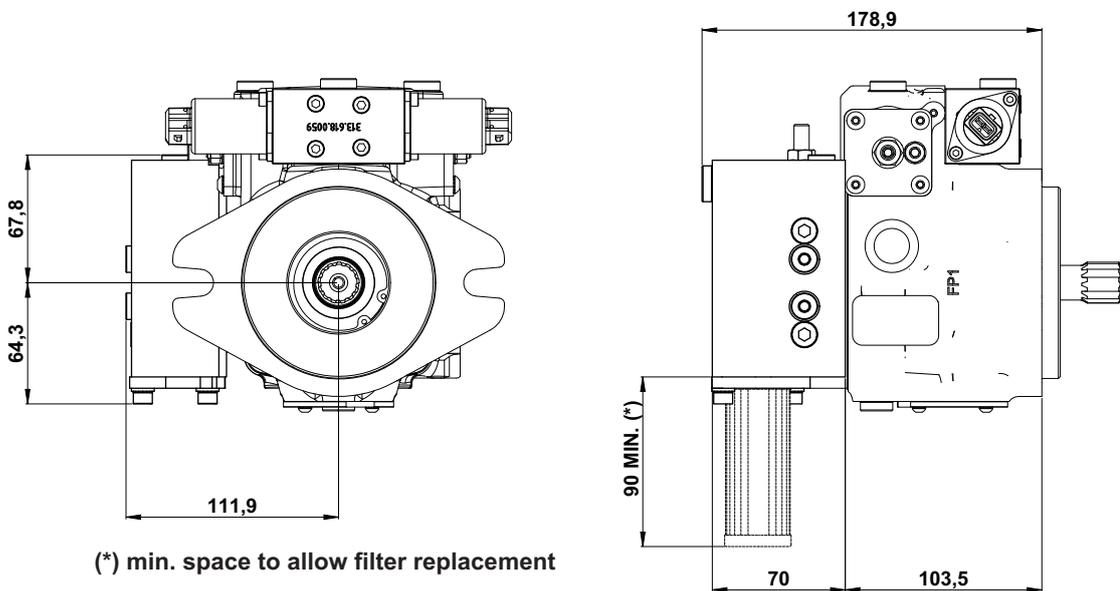

HYDRAULIC DIAGRAM

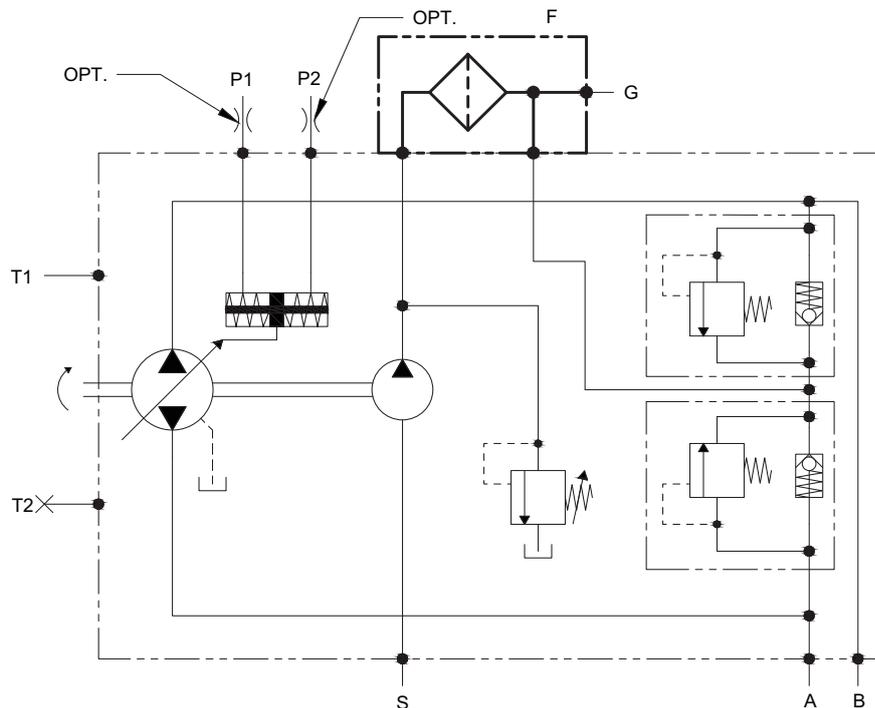

OPTIONAL FLT

FILTER WITHOUT CLOGGING INDICATOR

To assure the oil filtration of the boost pump a filter is available, directly flanged to the pump suction line.

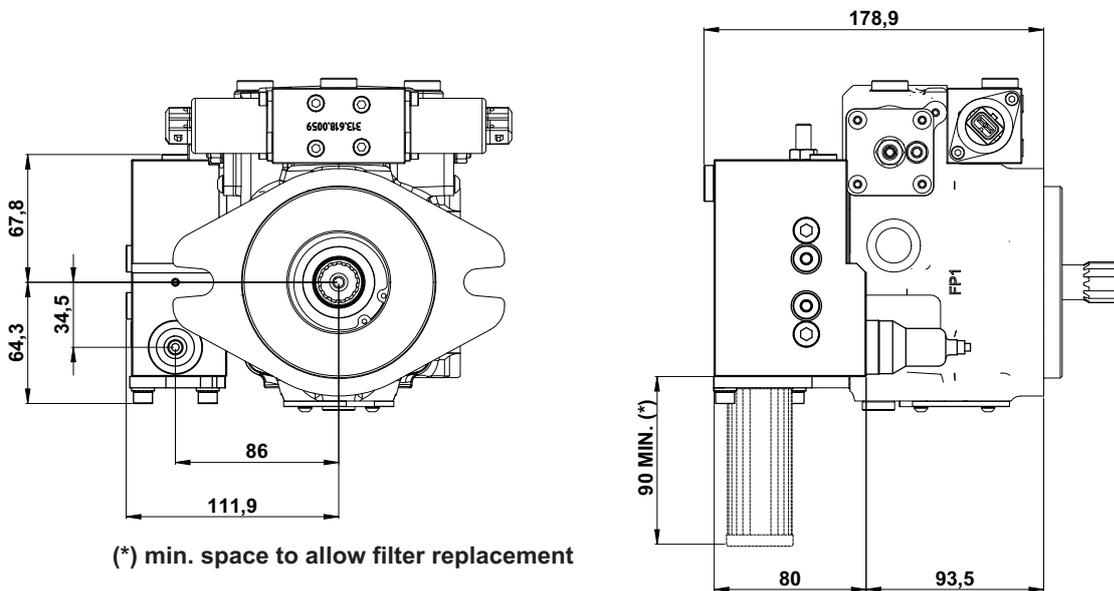

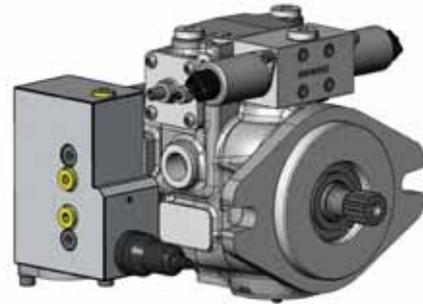

HYDRAULIC DIAGRAM

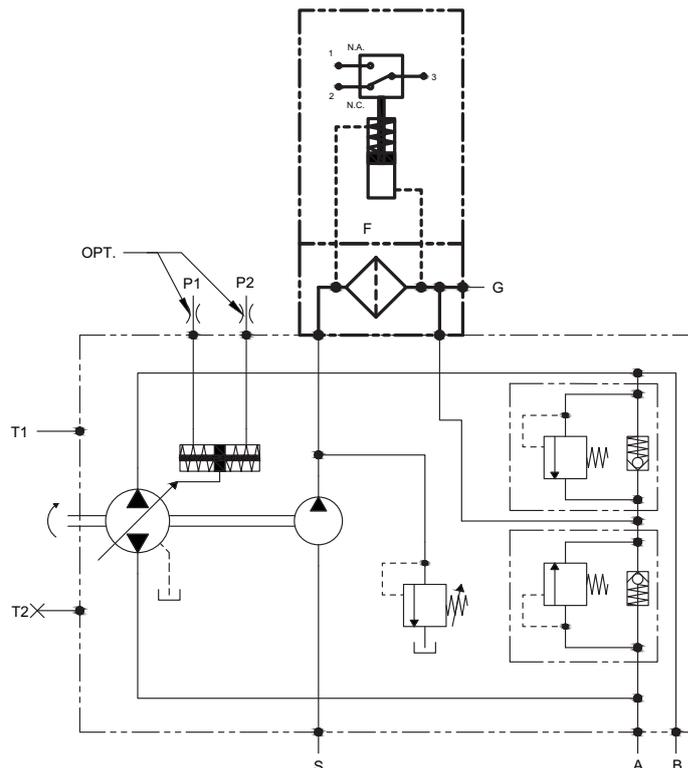

OPTIONAL FLTI

FILTER WITH CLOGGING INDICATOR

To assure the oil filtration of the boost pump a filter, with clogging indicator, is available directly flanged to the pump suction line. The clogging indicator is set at 0,13 MPa.

HYDRAULIC DIAGRAM

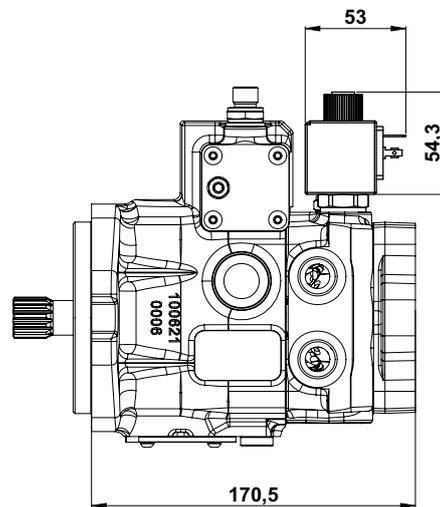

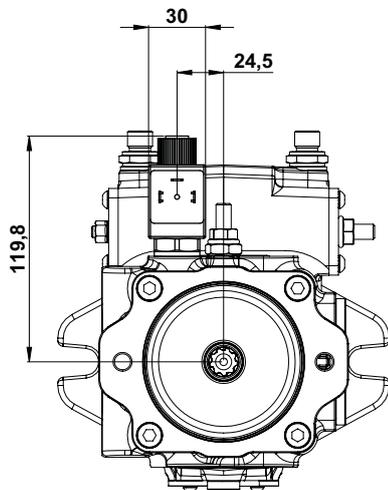

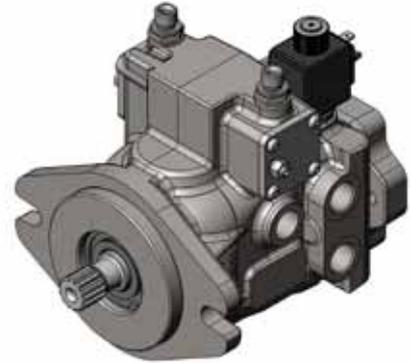

OPTIONAL MOB

MAN ON BOARD

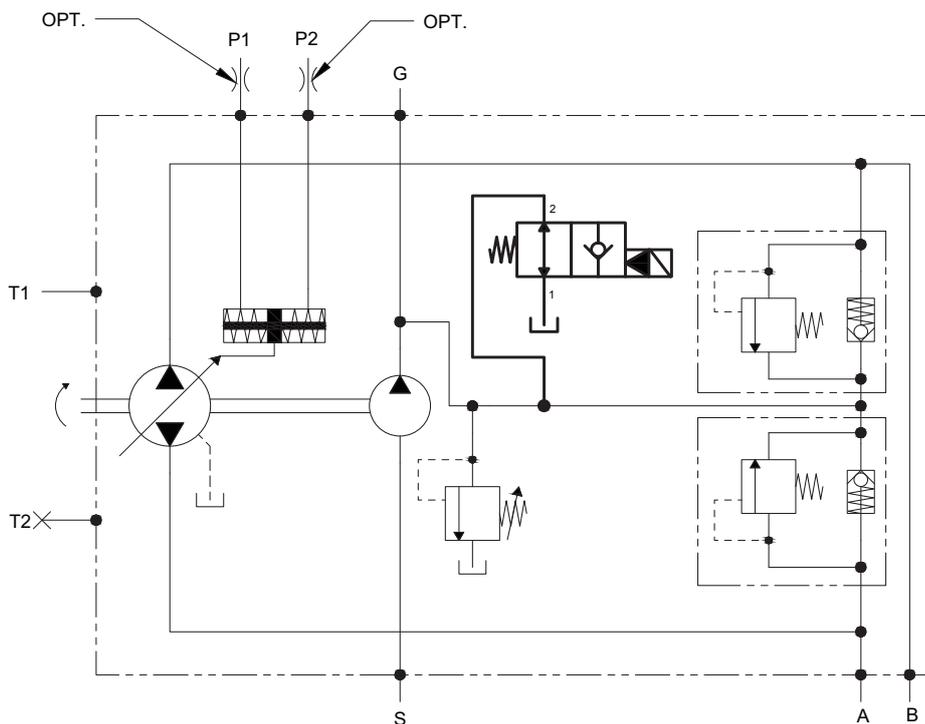

A normally open solenoid valve cuts the oil flow when not activated.

The valve allows oil flow to feed the hydraulic system only if activated (the operator is seated).

The solenoid valve is available for 12V or 24V DC voltage.
