	<b>VPR/3/EP..VMP+VE</b>	3-ways flow regulator, exceeding flow to pressure, pressure relief valve and electrical cut-off on the checked way	450	119	350	5100	93

**Operation**

The valve is designed to provide flow adjustment in C and concurrently discharge exceeding flow in R for other applications. A pressure relief valve provides control of the working pressure in C, while the solenoid allows for checked flow cut-off in C and retrieving in R. Best performance of the valve is assured when the flow in E is at least 10% bigger than in C and a minimum pressure of 7-10 bar (100-145 psi) is available in C or R. Pressure variations in C do not alter the checked flow. Working pressure in R can not exceed the rating value of the pressure relief valve in C, or else the whole E flow would end into R. When cutting-off in C, a crossing load loss of 7 bar (100 psi) and a constant few liters drain occur in D due to the working pressure in R. Make sure that a pressure relief valve is always used between the pump and the valve. The steel body version is recommended for use to control hydraulic hammers.

## ELECTRIC COILS FOR TUBE

## Operation

Multiple coil versions are available to allow use with direct and alternated current.

**Thermal insulation class:** F ( $T_{max} = 155^{\circ}\text{C}-303^{\circ}\text{F}$ ) - (VDE 0580)

**Relative duty cycle:** ED 100% (VDE 0580)

To assure ED = 100% and perform continuous coil operation, the following conditions should be met:

$TA + \Delta T < T_{max}$

Whereas:

- $TA$  = ambient temperature

- $\Delta T$  = temperature increase due to operation

- $T_{max}$  = maximum admissible temperature according to insulation class

We therefore recommend always checking that the maximum ambient temperature is same as  $T_{max} - \Delta T$  (providing no special operating requirement are there).

**Safety standards (DIN 40050):** IP54 without connector

IP65 with connector

**Admissible voltage range for long lasting and trouble free operations life:** nominal voltage  $\pm 10\%$

## Operation

Proportional coil. 12 and 24 coils direct voltage, supply a force proportional to the current amount.

**thermal insulation class:** F (TMAX = 155 °C-303°F-) - (VDE 0580).

**Relative duty cycle:** ED = 100 % (VDE 0580).

To assure ED=100% and perform continuous coil operation, the following conditions should be met:

$T_A + \Delta T < T_{MAX}$

$T_A$  = ambient temperature;  $\Delta T$  = a temperature increase due to operation;  $T_{MAX}$  = maximum admissible temperature according to insulation class.

We therefore recommend always checking that the maximum ambient temperature is same as  $T_{max} - \Delta T$  (providing no special operating requirement are there).

**Safety standards (DIN40050):** IP 54 without connector

IP 65 with connector

**Admissible voltage range for long lasting and trouble free operations life:** nominal voltage  $\pm 10\%$

**Current Hysteresis:** <2,5%

**Force Hysteresis:** <2%

**Operation**

There are 3 types of different solenoid connectors:

**"CC-CA"** 2-poles + GROUND electric connectors in compliance with DIN and A/ISO standards 43650 and 4400.

Electric connectors suitable for connection of DC and AC current coils. Type of current must be same as for the coil used.

**"CL"** 2-poles + rectifier + GROUND electric connectors in compliance with DIN and A/ISO standards 43650 and 4400.

Electric connectors suitable for connection of DC current coils BE...RAC. AC current operation only. Use of these poles depends on the type of valve used.

**"CP"** 2-poles + rectifier + GROUND electric connectors in compliance with DIN and A/ISO standards 43650 and 4400.

Electric connectors suitable for connection of DC current coils BT...RAC. AC current operation only. Use of these poles depends on the type of valve used.
