### 1 General information

The product range of Bucher Hydraulics SpA includes single pumps 05-100-212-212HP-250HP-300 (corresponding with the common group denominations: 05-1-2-2.5-3) and several combinations of double pumps, triple pumps, and so on, that can be assembled together according to

versions of displacement, flanging, and auxiliary valves. External gear pumps are widely used in modern hydraulic systems due to their high performance, long service life and low purchase and maintenance costs.

Here following we introduce you the new AP212HP family range.

Bucher Hydraulics has so achieved these results by constantly improving its design, control and manufacturing techniques inline with the latest technological developments, while simultaneously enhancing our Quality

Control System which ensures that every single product offers the same high standards.

Maintaining all the basic AP212 project characteristics, the new AP212HP series is improving the reliability of the complete product, strongly increasing the mechanical resistance of the pump body.

This important feature, reached through the use of cast iron material and dedicated body shape, allows the life extension of the products improving working and maximum pressures, reaching very high performance limits.

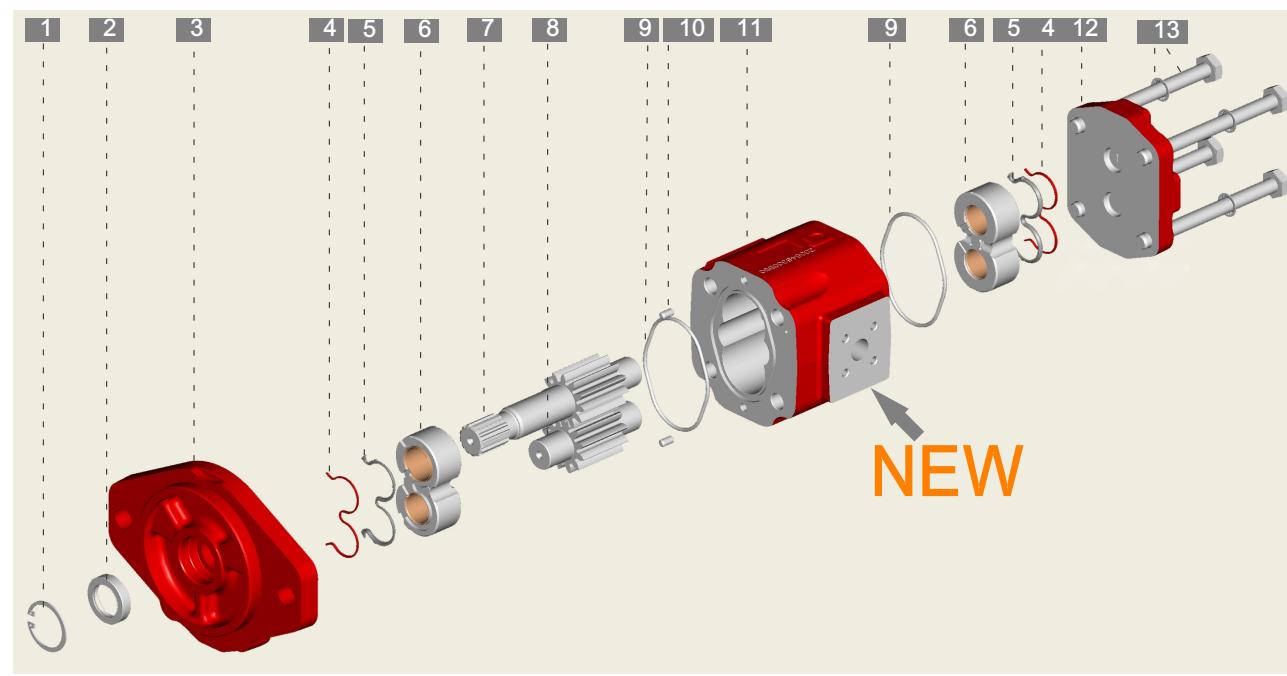

With this reliability performances it is possible to replace traditional aluminium pumps in applications where high working pressure in combination with high number of insertions and long life are requested.

The new AP212HP series pump is completed with front and rear cast iron covers: the mechanical strength of this product also allows to reduce noise and vibrations.

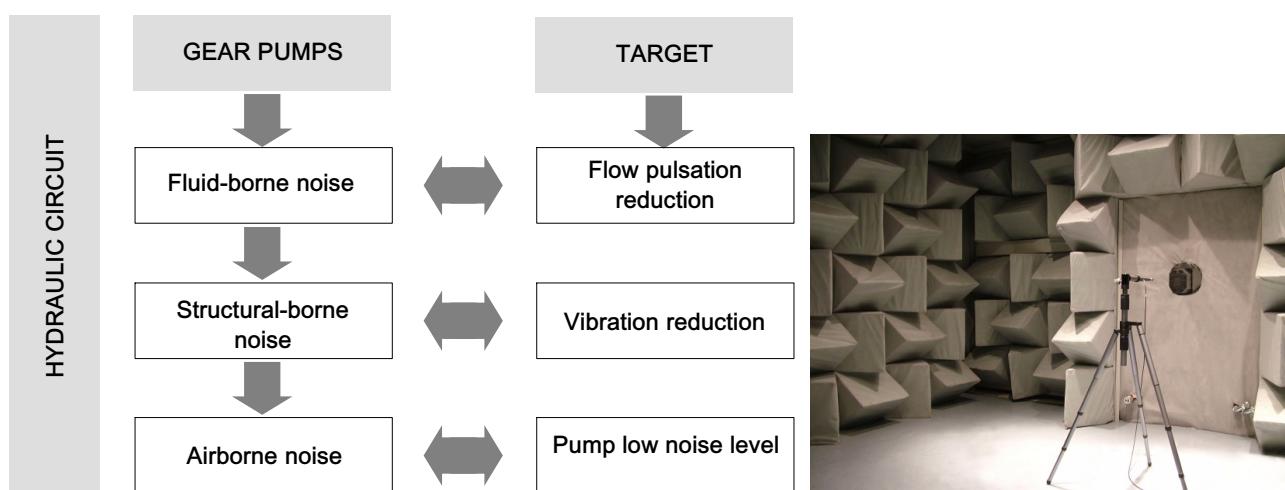

Other internal components, such as balancing blocks and gears, are the same used in the AP212 series; this means that the new AP212HP (unidirectional and reversible) is available in standard and low noise version.

Due to their compatible interface, tandem or multiple pumps are manufacturable both with common or split inlet suction lines.

## 1.2 Technical data

Features												
Operating fluid temperature range (mineral oil):						NBR	-15 / +80 °C (peak: -20 / +90 °C)					
						HNBR	-15 / +100 °C (peak: -20 / +110 °C)					
						FPM (VITON)	-5 / +100 °C (peak: -10 / +110 °C)					
Recommended fluids						hydraulic mineral oil-based						
Viscosity range:						Recommended	20-120 mm <sup>2</sup> /s (cSt)					
						Permitted	up to 700 mm <sup>2</sup> /s (cSt)					
						Permitted for starting	2000 mm <sup>2</sup> /s (cSt)					
Cleanliness:						recommended for operating pressure > 170 bar	21/18/15 ISO 4406					
						recommended for operating pressure < 170 bar	22/19/16 ISO 4406					
Standard seals material (valves not included)						NBR + HNBR standard ( ISO1629)						

Type	AP212HP		AP212HPLN		Max. pressure**						n min. P2 < 100 bar	n min. 100< n < 180 bar	n min. 180< n < P2	n max.

(°) Displacements on request: please contact our Sales Department.  
In case of use as tandem pump max pressure must be limited, please contact our Sales Department.

\*\* Max Pressure values referred to unidirectional pumps, standard and Low Noise type. Reversible versions -10%

 **IMPORTANT!**: Please consult Bucher Hydraulics if even one of the operating limits indicated in the table (temperature, pressure, rpm) is exceeded, as well as in the case of two or more maximum values at the same time, or for applications with particularly heavy-duty cycles

## 1.3 Pressure

Pressure levels:

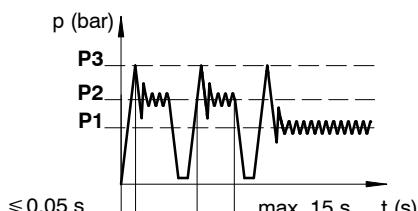

P1 = continuous pressure

P2 = intermittent pressure

P3 = peak pressure

The recommended oil speed in the pressure pipes is:

v = 2 to 5 m/s

## 1.4 Suction

The absolute suction pressure must be  $P_{in} \geq 0.75$  bar (11 PSI); therefore, the following conditions must be avoided:

- large height differences between pump and tank
- long stretches of piping
- special features such as:
  - bends
  - reductions in diameter
  - quick couplings
  - etc.

It is also advisable to choose a filter of a suitable size to minimise any pressure drop and to take measures to prevent gradual clogging over time.

(Example 1)

In certain cases, the suction pressure can exceed 1 bar (14.3 PSI), or atmospheric pressure.

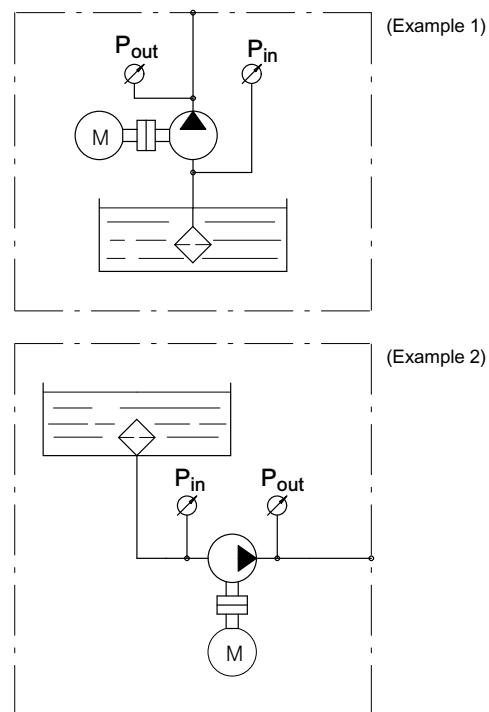

Please contact our Sales Department, solution for

$P_{in} \leq 3.5$  bar (50 PSI) , are available.

If in a particular application the  $P_{in}$  pressure is higher than the recommended value, contact our Sales Office.

The diameter of the suction pipe should ensure that the oil speed will fall within the range:  $v = 0.6 - 1.2$  m/s.

(Example 2)

## 1.5 General precaution

In addition to the recommendations regarding fluids, filtration, coupling, etc., we suggest the following:

- Always check the rotation direction of the pump's drive shaft; it must be compatible with the rotation direction of the pump itself.
- Be particularly careful in cleaning and make sure, when connecting the suction and pressure piping, that no chips, rag threads, teflon tape, etc. get into the pump circulation system.
- Check the tightness of the suction and pressure fittings, the correct positioning of the O-Ring, and make sure there is no dirt between the flange and the pump body.
- The first pump start-up can be facilitated by manually filling the suction piping and the pump itself with oil. To facilitate air bleeding, start the pump with the circuit not pressurised.

### 1.5.1 Directives and standards

- Atex:

Attention: The equipment and protective systems of this catalogue ARE NOT intended for use in potentially explosive atmospheres. Ref: Directive 99/92/EC and Directive 2014/34/UE

- To ensure the best heat distribution inside the tank, make sure the return pipe is not too close to the pump's suction piping. The pipings themselves should be below oil tank level to prevent the formation of foam.
- Do not subject the pumps to operating conditions different from those indicated on section 1.2 ; for extreme operations, always contact our Technical Department.
- Never use fluids different from those indicated in section 1.2 and do not use fluids incompatible with the pump seals (i.e. HNBR)
- In the event of pump painting, do not use solvents or paints that are incompatible with the material of the seals.  
Do not bake paint with excessively high temperatures. Do not paint over the product identification plate.

- ISO 9001:2008 / ISO 14001:2004

Bucher Hydraulics S.p.A. is certified for research, development and production of directional control valves, power units, gear pumps and motors, electro pumps, cartridge valves and integrated manifolds for hydraulic applications.

## 1.6 Identifying the rotation direction

The rotation direction of a gear pump is identified by looking at the pump from the front and with the drive gear turned upwards (see figures below).

Pumps with clockwise rotation (D) have a drive gear which turns clockwise, with the suction port on the left and the pressure port on the right.

Pumps with counterclockwise rotation (S) have a drive gear which turns counterclockwise, with the suction port on the right and the pressure port on the left.

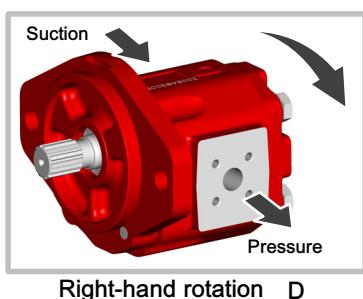

The figure also shows the pressure flow inside the pumps as the oil is transferred from the suction port to the pressure port.

As regards reversible pumps (R), the ports are alternatively for suction and pressure.

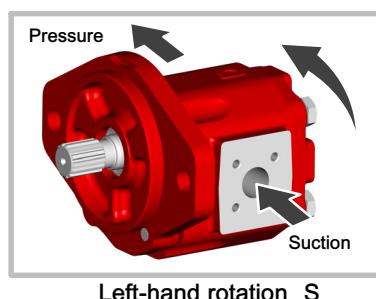

Pumps with a unidirectional rotation (D or S) have the denomination AP.

Pumps with reversible rotation have the denomination APR.

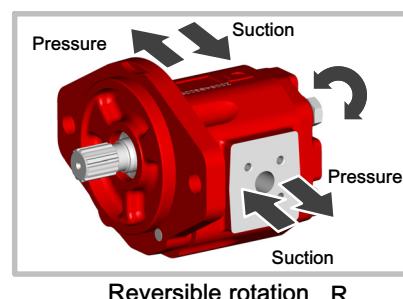

Pumps with "Low Noise" components have the denomination LN.

Right-hand rotation D

Left-hand rotation S

Reversible rotation R

## 1.7 Motor-pump coupling

Absolutely no radial or axial forces should be transmitted to the drive shaft in the motor-pump coupling.

Such forces cause rapid and irregular wear on the balancing surface of the bushings and gear support, with a consequent worsening in pump performance.

The coupling joint must be able to absorb any discrepancies in the coaxial alignment of the motor-pump shafts without placing any load on the pump shaft.

In the couplings between splined shafts, the connecting sleeve must be free to move along its axis.

The length of the sleeve must be sufficient to cover the splined sections of the motor-pump shafts completely in any position.

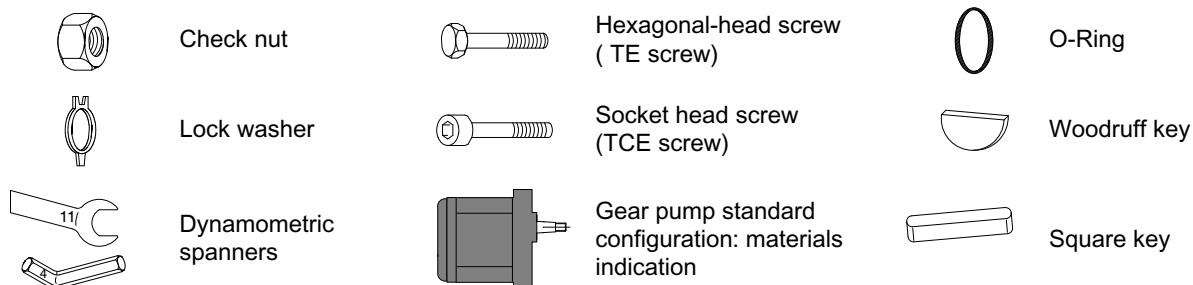

A clearance between shaft ends it is necessary.

Make sure that the splined coupling is suitably lubricated to protect it against rapid deterioration.

If there are radial and/or axial loads on the drive shaft, such as when it is driven by a V-belt and pulley or pair of gear wheels, it should be fitted with a front cover with supporting bearings. (See examples in section 3.4.3 )

Depending on the pump model concerned, these supports can replace the front cover of the pump or can be fitted in addition to and over the front cover.

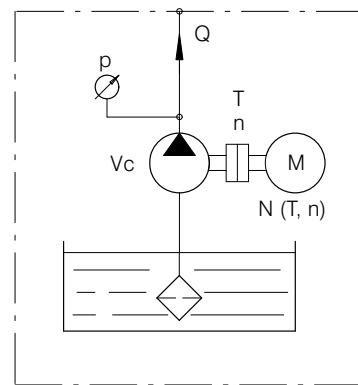

## 1.8 Non-standard symbols used in the text

## 1.9 Calculating the specification of a gear pump

The following parameters are defined:

$V_c$  = (cm<sup>3</sup>/rev) pump displacement;  
 $n$  = (rev/min) no. of rpms of the drive shaft;  
 $Q$  = (l/min) flow rate;  
 $p$  = (bar) operating pressure;  
 $T$  = (Nm) drive torque;  
 $N$  = (kW) Absorbed power;  
 $\eta_v$  = (%) volumetric efficiency;  
 $\eta_m$  = (%) mechanical efficiency;  
 $\eta_t$  = (%) total efficiency

$$Q = \frac{V_c \cdot n}{100000} \cdot \eta_v$$

$$T = 1.59 \cdot \frac{p \cdot V_c}{\eta_m}$$

$$N = \frac{Q \cdot p}{6 \cdot \eta_t}$$

### Example

AP212HP/15  $V_c = 15.1 \text{ cm}^3/\text{r}$   $n = 1500 \text{ r/min}$   $p = 200 \text{ bar}$   $\eta_v = 94\%$   $\eta_m = 90\%$   $\eta_t = 84.6\%$

$$Q = \frac{15.1 \cdot 1500}{100000} \cdot 94 = 21.29 \text{ l/min.}$$

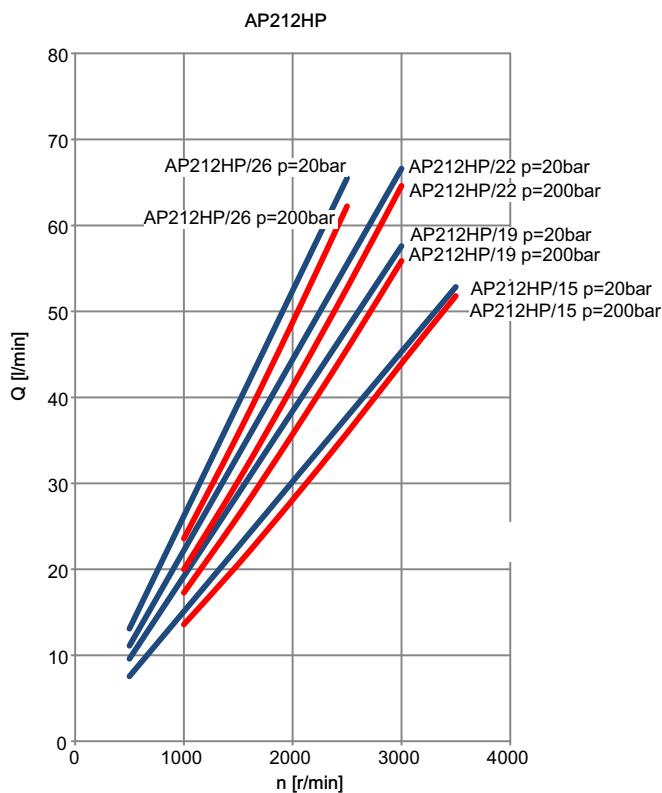

$$T = 1.59 \cdot \frac{200 \cdot 15.1}{90} = 53.35 \text{ Nm}$$

$$N = \frac{21.29 \cdot 200}{6 \cdot 84.6} = 8.39 \text{ kW}$$

## 2 Overview standard types

This pumps configuration are considered as "standard".

218	818	225	227	235	245	237	247
887S	880	887S-NPTF	880-NPTF	287S-B	280-B	287S-SAEB	

Example

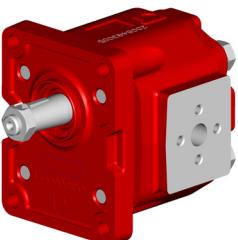

In the next pages, front, rear cover, and seals materials are listed for each pump series.

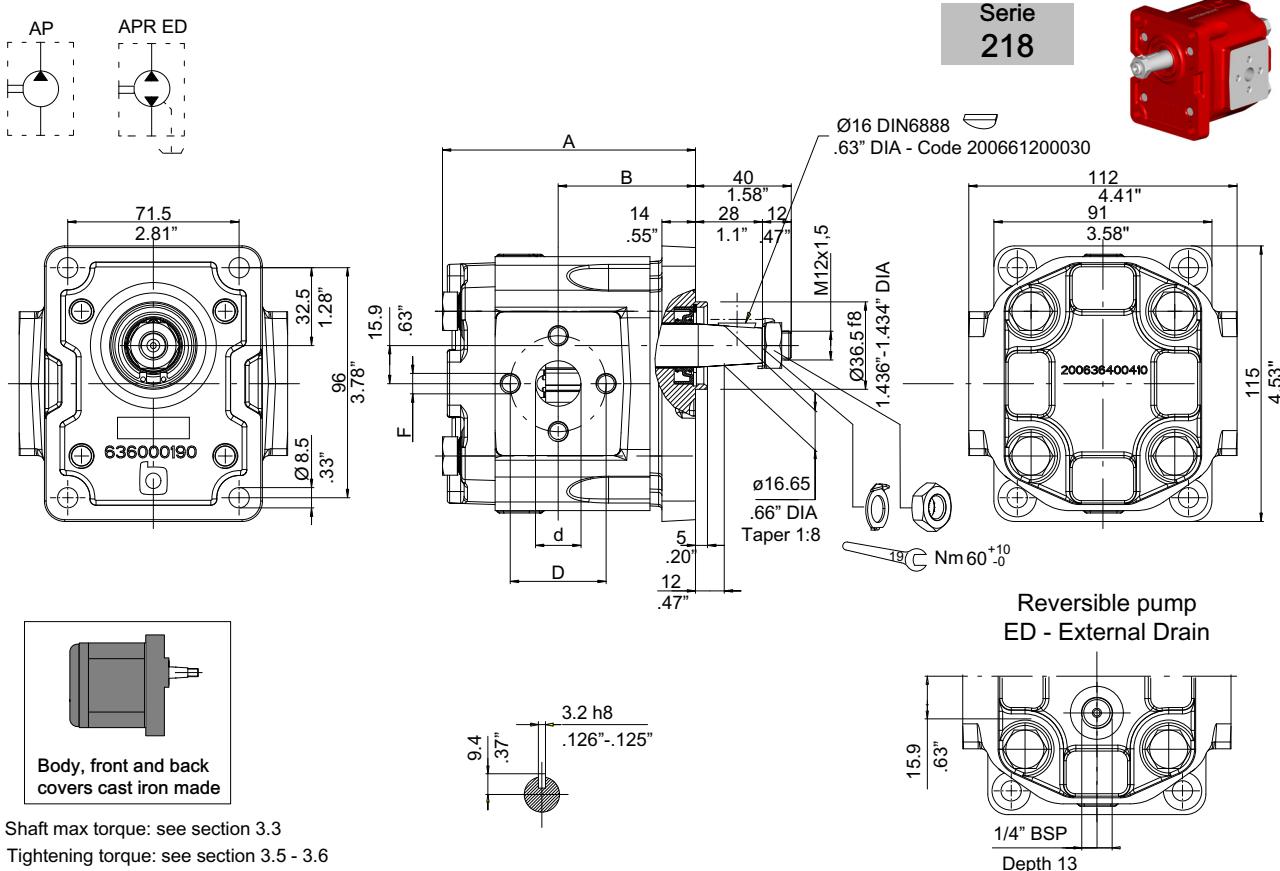

For ordering purposes, it is enough to outline the complete pump description (for example: AP212HP/15 D 218).

In case of a different configuration request (or a combination of different features, such as port threads, front flange materials, etc.), the description configurator shown in section 3.1 can be easily used.

### 2.1 Standard configuration

Port type			Front cover type (cast iron made)			Drive shaft		
European 4 bolts flanged		2	European rectangular (Ø 36.5 mm - 1.44")		1	Tapered shaft 1:8		8
German 4 bolts flanged		2	German rectangular (Ø 80 mm - 3.15 inches)		2	Tapered shaft 1:5		5
BSPP Threaded ports		8	Through 2 bolts (Ø 50 mm - 1.97")		3	9 Teeth external spline B17X14 DIN5482		7

### 3 AP212HP Single pump customised versions

In this section, a single AP212HP pump can be configured and customized.

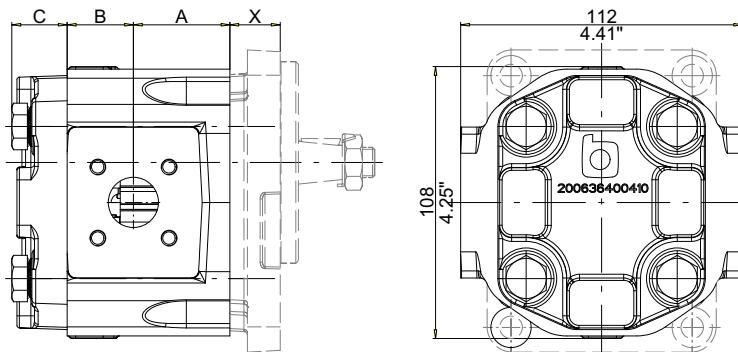

AP212HP wide availability of covers, bodies, gears and seals sets provides great flexibility to AP212HP pump range and allows several different pump configurations.

In order to simplify the selection of the desired pump combination, a 'configurator form' is available and, by filling it out, it will guide you in the pump creation process.

SAE-B 2 bolts (Ø 101.6 mm - 4 inches)		V		

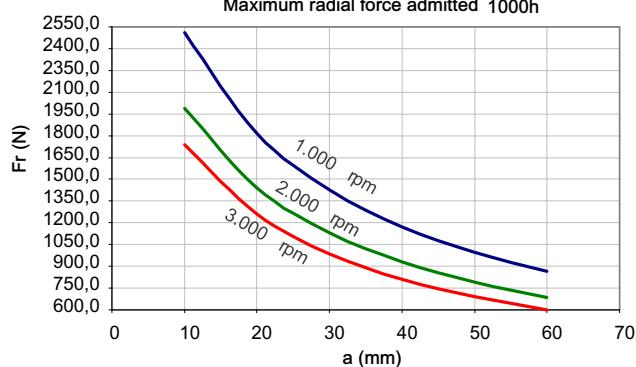

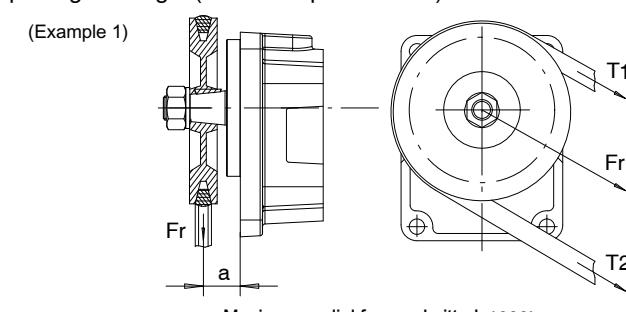

Cast iron front cover dimensions: see standard pumps data sheet

\* Please contact our Sales Department

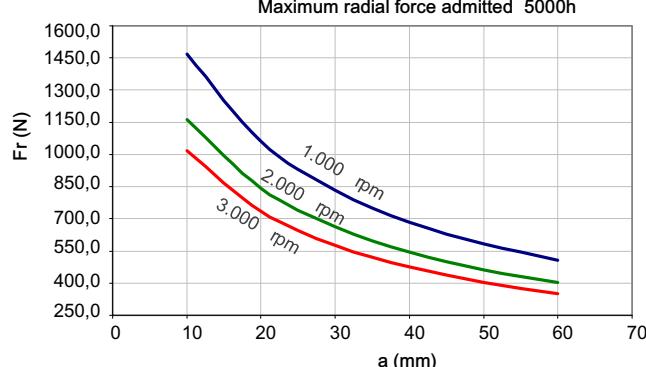

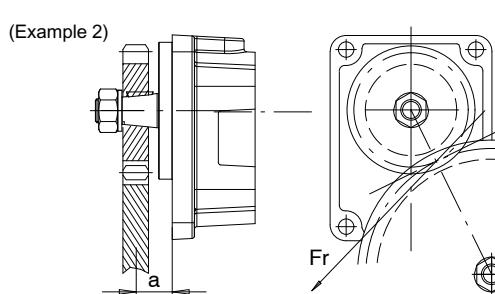

### 3.4.3 Front bearing application

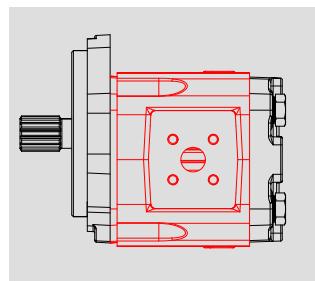

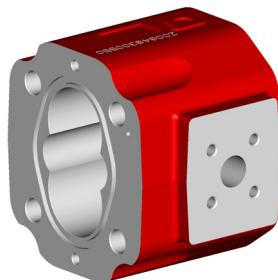

Front bearing should be utilized in presence of radial and/or axial load. If there are radial and/or axial loads on the drive shaft, such as when it is driven by a V-belt and pulley or pair of gear wheels, it should be fitted with a front cover with supporting bearings. (See example 1 and 2 )

Depending on the pump model concerned, these supports can replace the front cover of the pump or can be fitted in addition to and over the front cover.

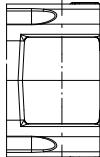

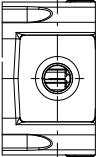

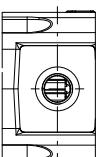

### 3.5 Cast iron body

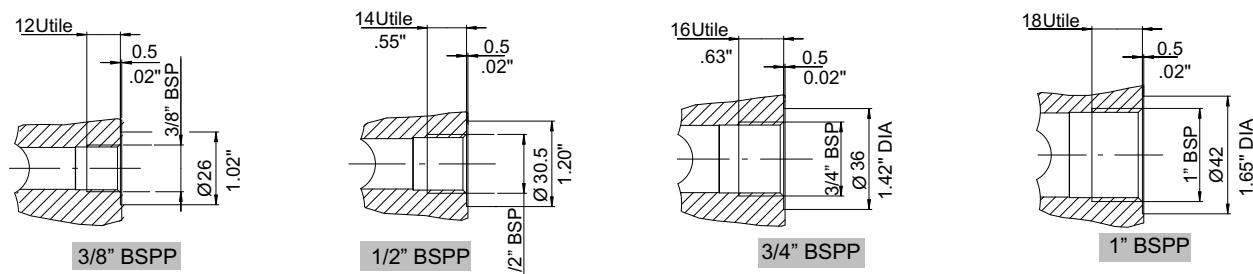

For reversible pumps alternative inlet and outlet ports have the same sizes as per inlet unidirectional rotation.

Type	Thread	Tightening torque	Ordering code
Back cover with external drain line, cast iron material for reversible pump	1/4" BSP	$30_{+7}^{-6}$ Nm	G1 (Standard)
	SAE4	$20_{+5}^{-5}$ Nm	G2
	M12x1.5	$30_{+7}^{-6}$ Nm	G3

3.6.3 Cast iron back cover with relief valve VI (internal drain)

A   P   2   1   2   H   P   /   1   5   -   S   -   A   1   S   -   8   A   H   -   V   I   *   *   -   A
---

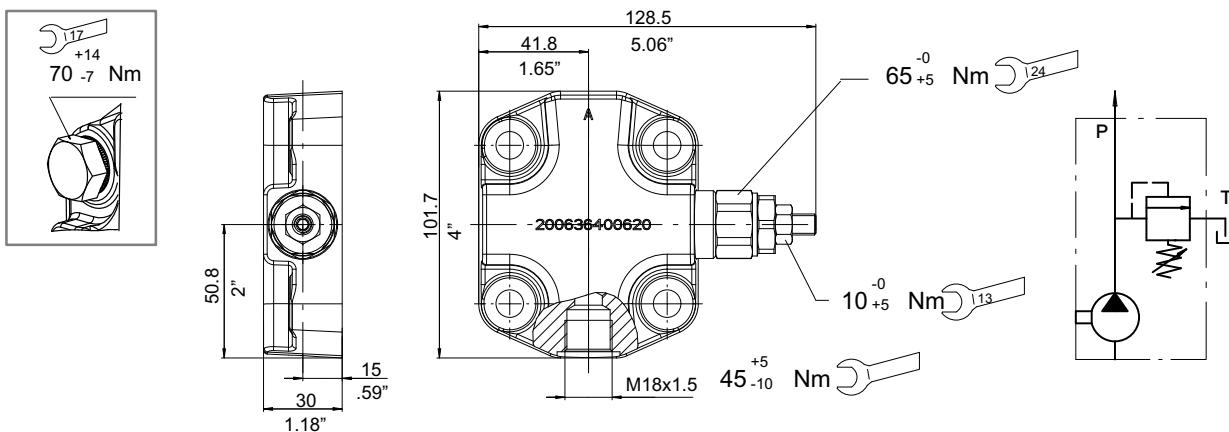

Type	Ordering code
Cast iron back cover with relief valve. Return to internal pump suction	VI**

\*\* pressure set value (bar) - in example: VI15 = 150 bar

Attention: Please take care that when the relief valve open, oil temperature increase quickly.  
These conditions have effect in the pump performances and life

3.6.4 Cast iron back cover with relief valve VE (external drain)

A   P   2   1   2   H   P   /   1   5   -   S   -   A   1   S   -   1   C   A   -   V   E   *   *   -   A
---

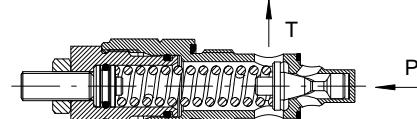

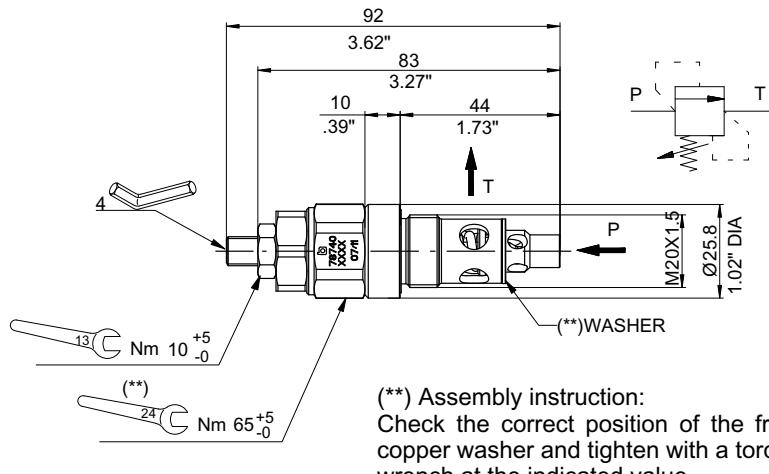

Type	Ordering code
Cast iron back cover with relief valve. Return to external pump tank	VE**

\*\* pressure set value (bar) - in example: VE06 = 60 bar

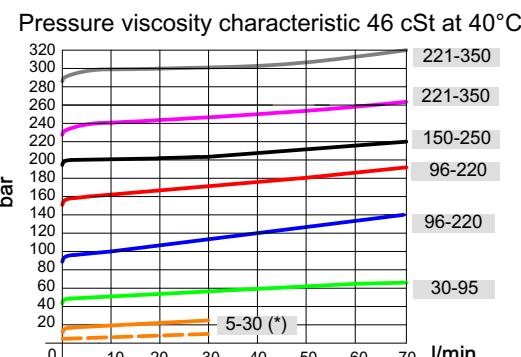

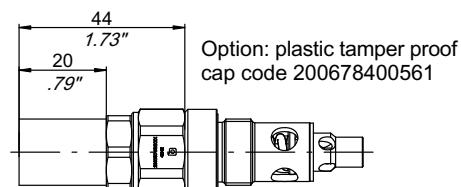

### 3.6.5 Pressure relief valve : \*\*VM01C VI\*\* and VE\*\* pressure setting range

Direct acting  
Balanced piston  
Adjustable setting  
Four setting ranges

Max. Pressure ..... 350 bar \*\*\*  
Max flow rate ..... 60 l/min.  
Temperature range ..... -20/+100 °C  
Weight: ..... 0.155 Kg.

The valve can be sealed against tampering

(\*) see performances trace/minimum pressure setting (---)

The purpose of a relief valve is to keep the maximum system pressure at a safe level. When the external gear pump is supplied with pressure relief valves, the correct calibration is provided by Bucher Hydraulics S.p.A. and there are no reasons to change this value. When ordering, state in full the sheath part number, and, if the valve is to be supplied with sheath already fitted, the relief pressure setting required.

\*\*\* Maximum admitted pressure value: referred to valve only. For max admitted values see pump limits.

#### Performances

Max. flow	60 l/min.
Pressure setting flow	5 l/min
Max internal leakage	200 cm/min at 80% of nominal pressure setting
Oil viscosity	12 to 400 cSt
Oil temperature	-20 to 100 °C
Recommanded filtration	21/19/16 (10 NAS 1638)
Marking info:	Printed code and date

Spring	Spring code	Setting range	Standard setting	Q max (l/min)	Type	Relief valve only code
00	-	Plugged	Without valve	-	00VC00	200978400140
02	200662403160	5 - 30 bar	20 bar	30 (*)	02VM01C	200787403600
05	200662403080	30 - 95 bar	50 bar	60	05VM01C	200787403480
12	200662403050	96 - 220 bar	120 bar	60	12VM01C	200787403420

23	200662403060	221 - 350 bar	230 bar	60	23VM01C	200787403430

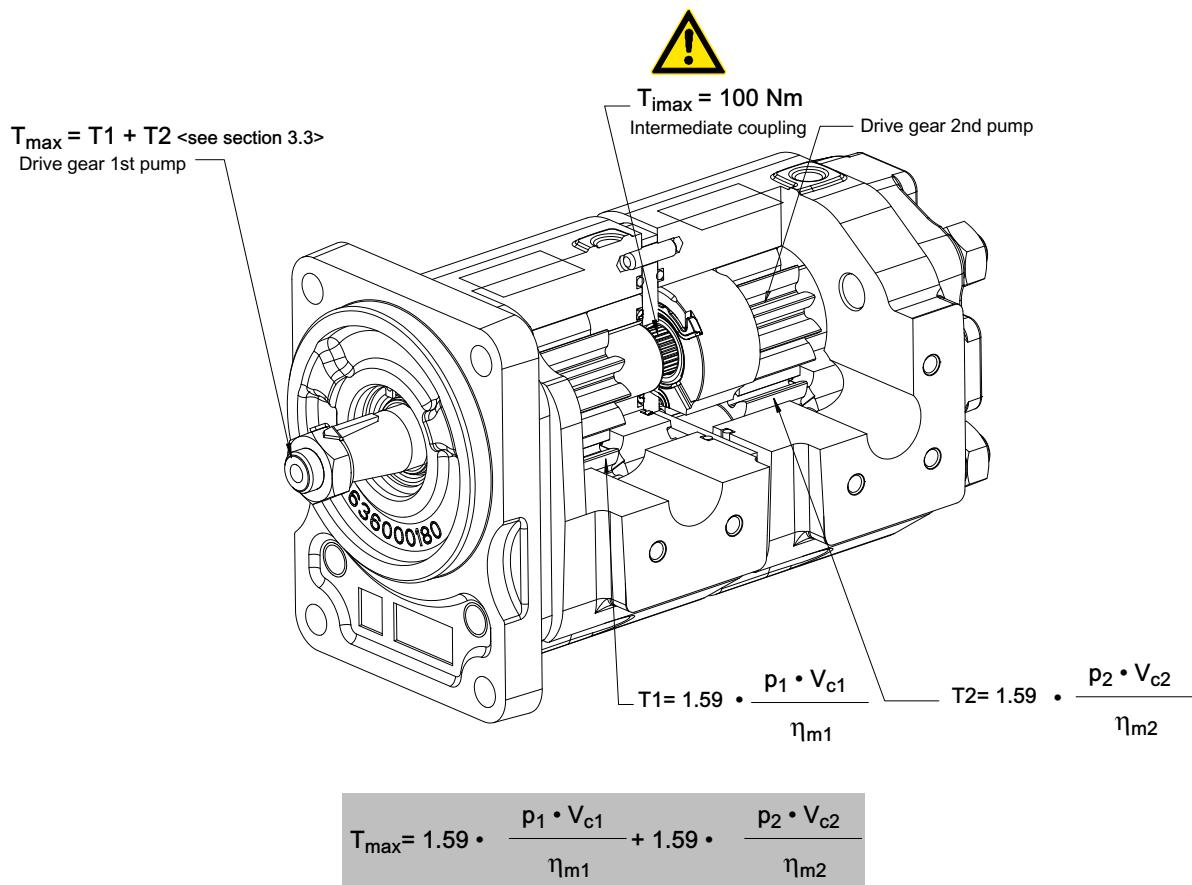

Pressure setting valve referred to 5 l/min

## 4 Multiple gear pumps

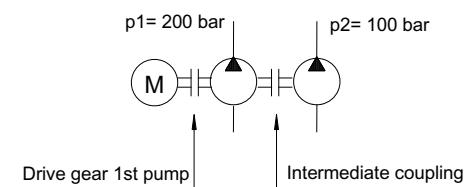

The multiple external gear pumps standard version includes an intermediate cover without shaft seal between the pumps.

If needed, it is possible to order a customised version with intermediate seal, see section 4.3  
(4.5 for tandem pumps AP212HP+AP212 aluminium body).

### 4.1 Drive torque

Example: AP212HP/19 + AP212HP/15

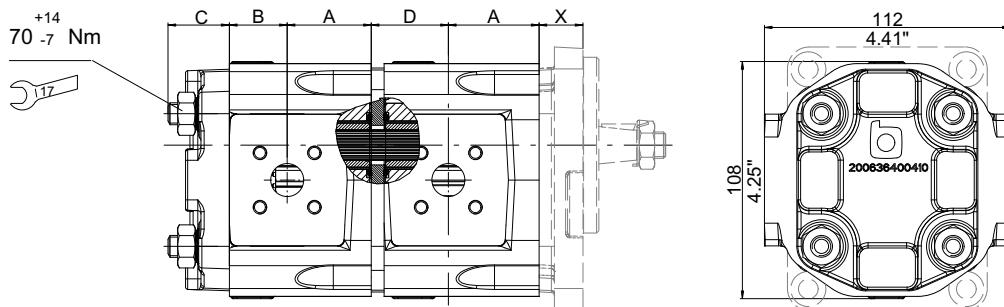

$$T_{\max} = 1.59 \cdot \frac{19.2 \cdot 200}{90} + 1.59 \cdot \frac{15.1 \cdot 100}{90} = 68 + 26.7 = 94.7 \text{ Nm}$$

$$T_{\max} = 94.7 \leq 130 \text{ Nm}$$

(taper 1:8)

$$T_2 = 26.7 \leq T_{\max} 100 \text{ Nm}$$

#### 4.2 Tandem pumps dimensions AP212HP+AP212HP (standard version without shaft seal between the pumps)

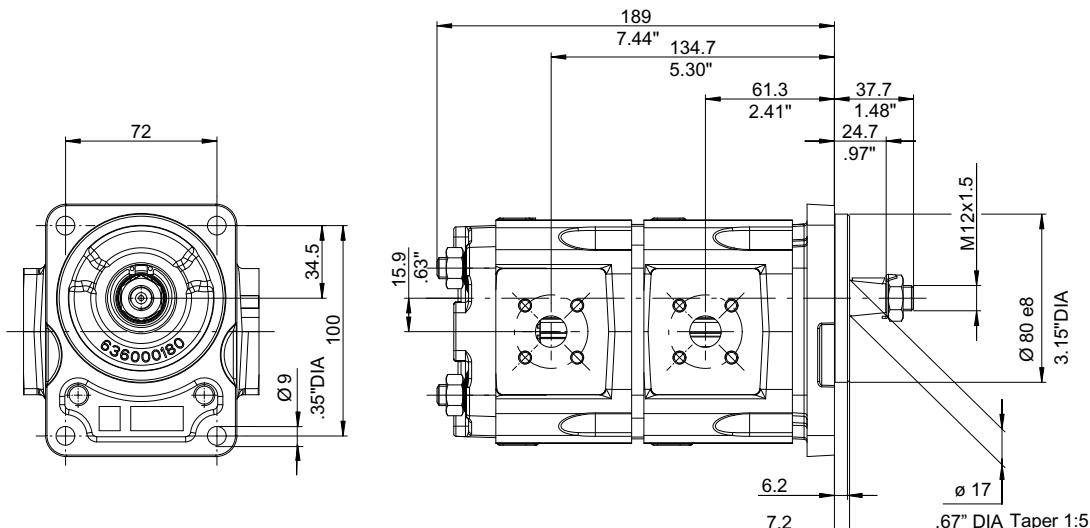

Pump size	A		B		D (B + 5.8)		C*	
	mm	inches	mm	inches	mm	inches	mm	inches
AP212HP/15	38.3	1.51	26.3	1.04	32.1	1.26	28	1.10

### 1 Function

AP= single gear pump - unidirectional  
APR = single gear pump - reversible

### 7 Shaft seal material type code

see section 3.4.1

### 2 Series

212HP

### 8 Front cover series/material with/without bearing code

see section 3.4.2 and 3.4.3

### 3 Displacement

15= 15.1 cm<sup>3</sup>/rev  
19= 19.2 cm<sup>3</sup>/rev  
22= 22.2 cm<sup>3</sup>/rev  
26= 26.2 cm<sup>3</sup>/rev  
29= 28.9 cm<sup>3</sup>/rev  
33= 33 cm<sup>3</sup>/rev

### 9 Type of ports code

see section 3.5

### 4 Version

Omitted if 12 teeth standard  
LN= 12 teeth Low Noise version

### 10 Inlet/outlet port size code combination

see section 3.5

### 5 Rotation

S = left-hand rotation  
D = Right-hand rotation  
Omitted if reversible version

### 11 Body material + seal material code

see section 3.5.1

### 6 Shaft end code

see section 3.3

### 12 Back cover type / Valve setting value

see section 3.6

### 13 For Tandem pumps with or without shaft seal between the pumps

Omitted if without shaft seal between the pumps (standard versions)  
P= with shaft seal between the pumps (special versions)

## 5 Circuits/valves option

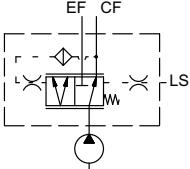

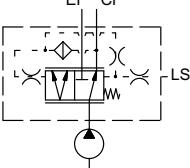

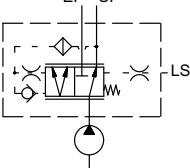

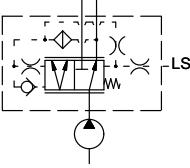

For Technical features and availability please contact our Sales Department

### 5.1 Load sensing circuits

#### 5.1.1 Load sensing valve rear cover assembly position

Hydraulic scheme	Family	Description	Code
	STATIC	Static LS signal	LSB01
	DYNAMIC	Dynamic LS signal	LDB01
	STATIC	Static LS signal + check valve on CF line	LSB02
	DYNAMIC	Dynamic LS signal + check valve on CF line	LDB02
	STATIC	Static LS signal + relief valve on LS signal	LSB03
	DYNAMIC	Dynamic LS signal + relief valve on LS signal	LDB03
	STATIC	Static LS signal + check valve on CF line and relief valve on LS signal	LSB04
	DYNAMIC	Dynamic LS signal + check valve on CF line and relief valve on LS signal	LDB04

5.1.2 Load sensing valve lateral assembly position

Hydraulic scheme	Family	Description	Code
	STATIC	Static LS signal	LSS01
	DYNAMIC	Dynamic LS signal	LDS01
	STATIC	Static LS signal + check valve on CF line	LSS02
	DYNAMIC	Dynamic LS signal + check valve on CF line	LDB02

## 6 Rotation changing instructions

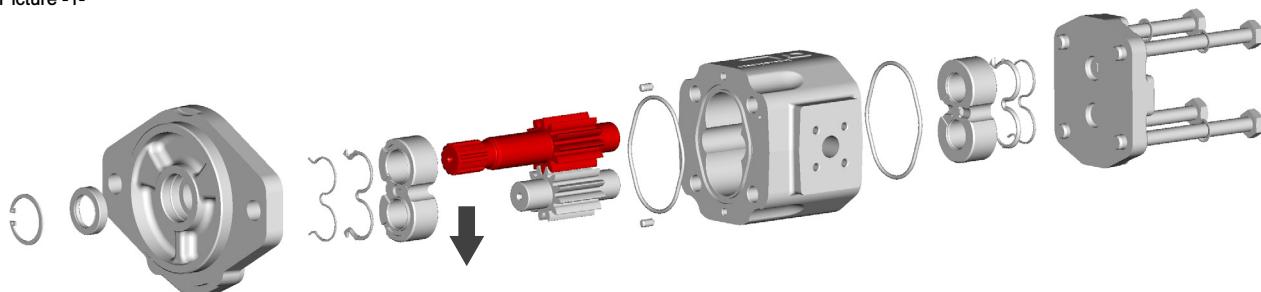

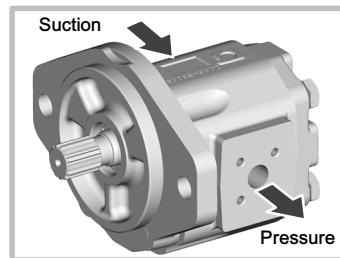

For the AP212HP pumps with unidirectional left (S) or right (D) rotation (not for 287S-SAEB pump) it is possible to change the rotation direction of the entire range without having to replace any component. To ensure a good technical result, we recommend in any case that such inversion should be carried out at our factory.

Following we represented a procedure for the pump rotation inversion, here in example a clockwise rotation pump (D). To obtain a counter-clockwise rotation (S) see the following pictures/instructions.

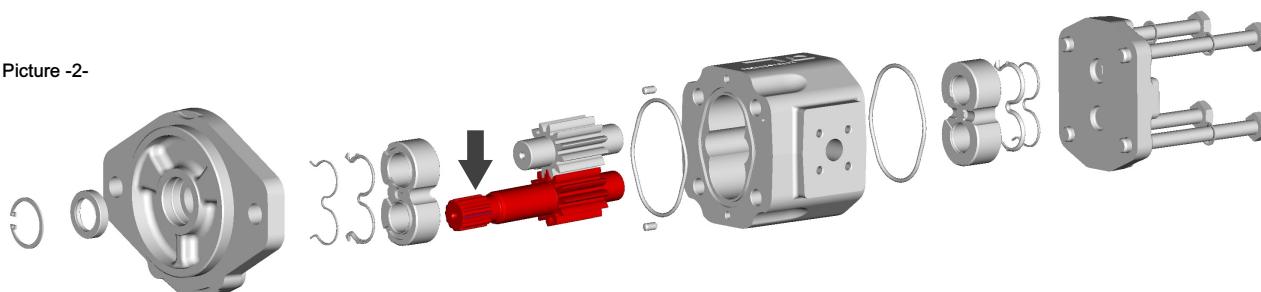

At start up increase pressure slowly where possible.

Picture -1-

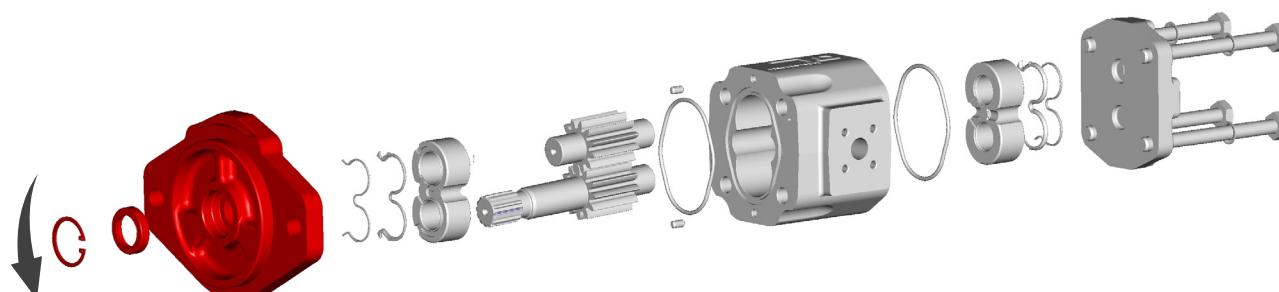

Initial configuration "Right" (D)

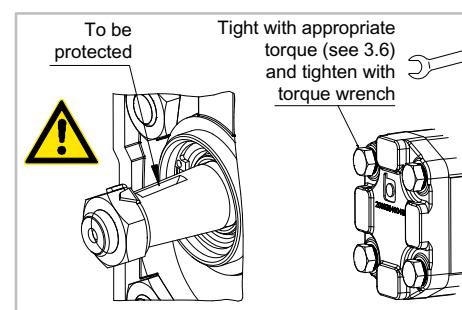

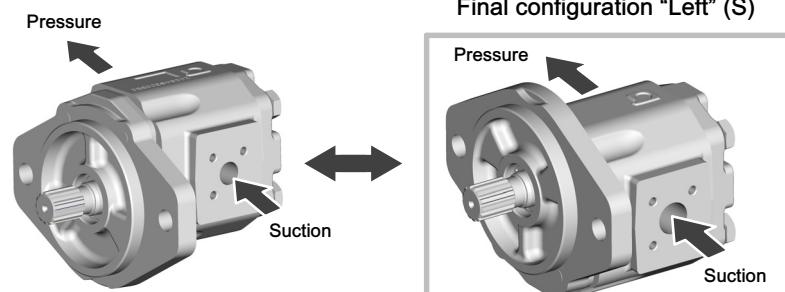

Picture -2-

Picture -3-

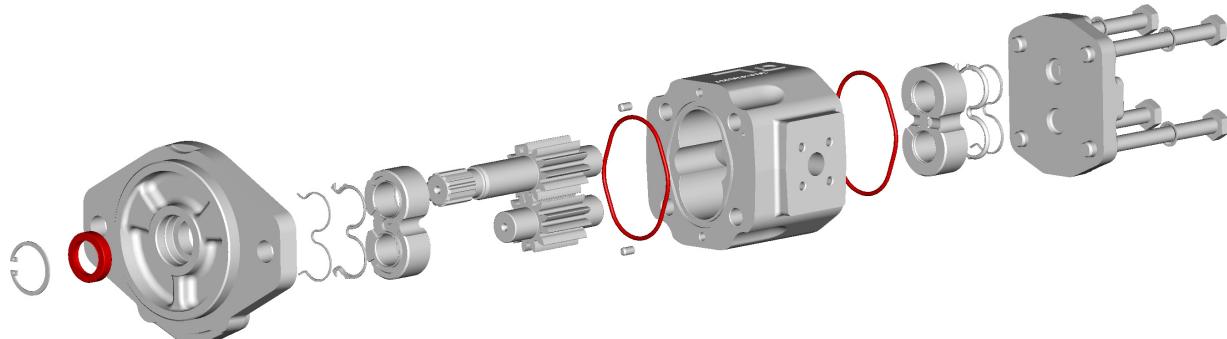

Final configuration "Left" (S)

## 7 Pumps seal kit NBR standard type

The seal Kit code includes:

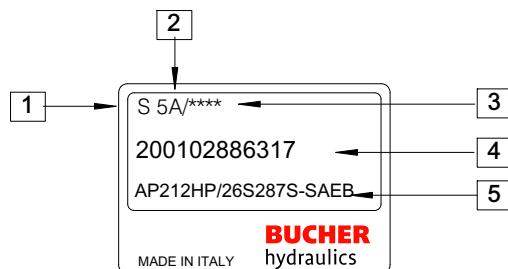

OR and shaft seal

Type	Code
AP/APR212HP	200974001570

Minimum kit order quantity is requested: please contact our Sales Center

## 8 Product identification plate

- 1 : Rotation  
(D= Clockwise rotation - S= Counterclockwise rotation)
- 2 : Manufacturing year and month
- 3 : Progressive identification no. (optional)
- 4 : Bucher Hydraulics S.p.A. product code
- 5 : Description

Manufacturing month	Manufacturing year					
	2014	2015	2016	2017	2018	2019

Customer:			
Location:			
Overall quantity per year:			
Minimum batch size:			
Delivery time requested:	Feasibility:	Prototypes:	Series:
Target price:			
Type of application:			

External gear pump general data						
Rotation	S	D	R	Speed range		
Displacement: Single pump (cm <sup>3</sup> /rev)				Continuous work pressure (bar)	1st      2nd      3rd	
Double pump (cm <sup>3</sup> /rev)	1st	2nd		Peak work pressure (bar)	1st      2nd      3rd	
Multiple pump (cm <sup>3</sup> /rev)	1st	2nd	3rd	Oil type		
Drive shaft				Oil temperature (°C)	min      max	
Port type				Oil viscosity (cSt)	min      max	
Front cover type				Suction line pressure		
Bearing support				Voltage		
Front cover material				Drain case pressure		
Intermediate cover (with or without shaft seal)	with	without		Radial load (N)		
Back cover type/circuit				Axial load (N)		
Back cover material	aluminium	cast iron		Working hours per year		
Valves				Cycles per year
