Table: 3

in this table the number of inlets in function of the number of elements are indicated.

Number of elements	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
"IN" Number of inlets	1	1	2	2	3	3	4	4	5	5	6	6	7	7	8

EXTERNAL DRAIN <i>STANDARD SETUP</i>	INTERNAL DRAIN
<p>Connect the drain port (T) to the tank</p>	<p>To predispose the divider to the internal drain, execute following operations:</p> <ol style="list-style-type: none"> 1. remove the G 1/8 dowel inside the drain port 2. with a 1/2 G plug, plug the drain port (T)
	

In **table 1** the functioning range of single flow divider elements is indicated.

The higher is the feeding capacity (q), the higher is the precision of the flow division, but in opposition there are losses of loading and higher noise. Therefore we suggest to feed the elements with capacities equal or a few superior to the ones indicated in the column **"RECOMMENDED"**.

Remember to verify the capacities even in phase of flow reunion.

The pressure indicated are to be considered as maximum of functioning, the flow divider is able to bear peaks of pressure 20 % superior.

How to calculate the "Li" and "Lt" measures of flow dividers:

From **table 2** it is possible to obtain the "Li" measure for flow dividers up to 16 elements with equal displacements; for flow dividers with different elements or with more than 16 elements the "Li" and "Lt" measure have to be calculated by the following formula:

$$Li = [(n-1) \times 33] + 107 + (A1 + A2 + A3 + \dots)$$

$$107 = 53,5 + 53,5$$

n = Number of elements of flow divider

A1... An = heights of elements of flow divider

$$Lt = Li + 19$$

$$19 = 9,5 + 9,5$$

EXAMPLE: To obtain the measures Li and Lt of a flow divider with three elements (n=3), **RV-1H / 3,8 x 2+ 1 Motor 7,8 cc**

Distance between fixing hole centres

$$Li = [(3-1) \times 33] + 107 + 52 + 52 + 67 = 344 \text{ mm}$$

Total Length

$$Lt = 344 + 19 = 363$$

In **table 3** the number of inlets in function of the number of elements are indicated.

For flow dividers with many inlets, as they are all communicating it is even possible to use only one of them, by plugging the other ones. We suggest to make full us at least of **1** inlet every **40 l/min** capacity.

To obtain errors of division **inferior to 3%** there must be no difference of pressure between the elements superior to **30 bar**. To obtain high precisions the respect of the following parametres is also important:

- Environment temperature: -10°C ÷ +60°C Oil temperature: +30°C ÷ +60°C
- Hydraulic oil based on hlp, hv (din 51524) minerals Oil Viscosity 20 ÷ 40 cSt
- Oil filtering 10 ÷ 25 µ

Table: 3 in this table the number of inlets in function of the number of elements are indicated.

Number of elements	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
"IN" Number of inlets	1	1	2	2	3	3	4	4	5	5	6	6	7	7	8

EXTERNAL DRAIN <i>STANDARD SETUP</i>	INTERNAL DRAIN
<p>Connect the drain port (T) to the tank</p>	<p>To predispose the divider to the internal drain, execute following operations:</p> <ol style="list-style-type: none"> 1. remove the G 1/8 dowel inside the drain port 2. with a 1/2 G plug, plug the drain port (T)
	

In **table 1** the functioning range of single flow divider elements is indicated.

The higher is the feeding capacity (q), the higher is the precision of the flow division, but in opposition there are losses of loading and higher noise. Therefore we suggest to feed the elements with capacities equal or a few superior to the ones indicated in the column "**RECOMMENDED**".

Remember to verify the capacities even in phase of flow reunion.

The pressure indicated are to be considered as maximum of functioning, the flow divider is able to bear peaks of pressure 20 % superior.

How to calculate the "Li" and "Lt" measures of flow dividers:

$$Li = [(n-1) \times 33] + 130,5 + (M1 + M2 + M3 + \dots) + (A1 + A2 + A3 + \dots)$$

$$130,5 = 53,5 + 37 + 40$$

n = Number of elements of flow divider

A1... An = heights of elements of flow divider

M1... Mn = heights of motor elements

$$Lt = Li + 21,5$$

$$21,5 = 9,5 + 12$$

EXAMPLE: To obtain the measures Li and Lt of a flow divider with three elements (n=2) **RV-1H / 3,8 x 2 + 1 Motor 11**

Distance between fixing hole centres

$$Li = [(2-1) \times 33] + 130,5 + 47 + 52 + 52 = 314,5 \text{ mm}$$

Total Length

$$Lt = 314,5 + 21,5 = 336$$

In **table 3** the number of inlets in fuction of the number of elements are indicated.

For flow dividers with many inlets, as they are all communicating it is even possible to use only one of them, by plugging the other ones. We suggest to make full us at least of **1** inlet every **40 l/min** capacity.

To obtain errors of division **inferior to 3%** there must be no difference of pressure between the elements superior to **30 bar**. To obtain high precisions the respect of the following parametres is also important:

- Environment temperature: -10°C ÷ +60°C Oil temperature: +30°C ÷ +60°C
- Hydraulic oil based on hlp, hv (din 51524) minerals Oil Viscosity 20 ÷ 40 cSt
- Oil filtering 10 ÷ 25 µ
