

## Modular-mounting Check Valve, 10 mm Pilot-operated Series SREZ ...

- 350 bar, 120 l/min
- Pilot-operated

- Closure of the service line(s) with near zero leakage

- With ISO 4401 / CETOP R35H size 5, NFPA D05, DIN 24 340 A10 interface

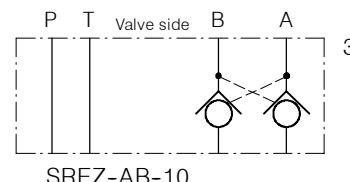

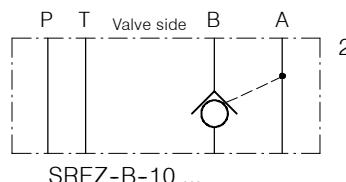

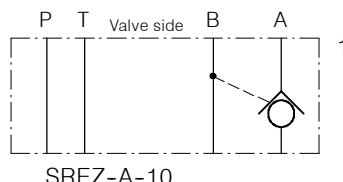

### 1. Description

These self-piloting modular check valves are designed for use in stacking assemblies. They ensure closure of the service line with near-zero leakage, and therefore block the effects of:

- a) external forces on the actuator
- b) various leakages across the directional valve. The directional valve used must connect both service lines A and B to tank T in its middle position (spool

type G) to ensure that the check valve pilot piston is fully unloaded. O-rings partially recessed in counterbores ensure effective hydraulic sealing at the lower valve interface.

Ex. SREZ-A-10

Seal kit no. DS-033, comprising:

| Item. | Qty. | Description    | Size               |
|-------|------|----------------|--------------------|
| 1     | 2    | O-ring no. 017 | Ø 17,17 x 1,78 N90 |
| 2     | 5    | O-ring no. 014 | Ø 12,42 x 1,78 N90 |

## 7. Installation and servicing

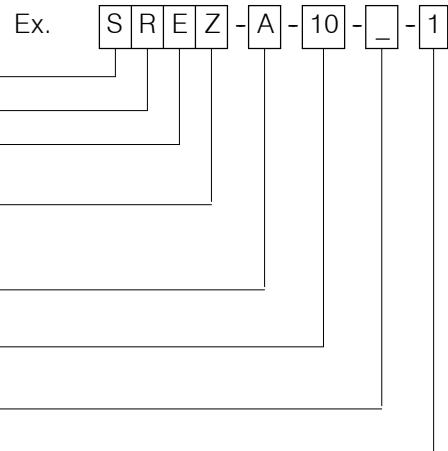

All installation and servicing must be carried out with care, and by qualified personnel only. At installation, be sure to mount the valve the correct way up.

Do not confuse the flat surface (directional valve side) and the surface with O-ring counterbores (actuator side). When changing seals, the new seals

should be thoroughly oiled or greased before fitting them to the valve. Use the correct tightening torque when fitting the end plug and the blanking plug.

## 8. Ordering code
