### 4. Installation and servicing

All installation and servicing must be carried out with care, and by qualified personnel only. At installation, make sure that the valve interface aligns with the interface of the mating surface and

do not confuse the directional valve ('top') and manifold ('bottom') faces of the valve. When changing seals, the new seals should be thoroughly oiled or

greased before they are fitted. When fitting the cartridge, ensure that the seals are oiled or greased and use the specified tightening torque.
